

# EPILEPSY

- SEIZURES STOPPED WITHIN FIRST WEEK
- DRAMATIC IMPROVEMENT IN SLEEP
- ABLE TO COME OFF OFF ALL PHARMACEUTICAL MEDICATIONS

## 10 YEAR OLD FEMALE - AUSTRALIA

I am the mother of a ten year old child that was diagnosed with Tuberous Sclerosis at the age of five months. As a result of the genetic condition she has been severely epileptic since birth. Prior to starting medication she was having 15-20 seizures a day.

Over her short life she has trialled over twenty anti-epileptics, had two brain surgeries and trialled various diets / supplements. Other than a six month period when she was 18 months old, when we briefly managed to find the perfect balance of medication and brain development, she has never been seizure free. As a result of her epilepsy, she has an intellectual disability diagnosis and currently attends a special needs school. She has also never slept more than a four hour period. She has needed constant care and supervision all her life. As you can imagine, this has placed a huge strain on our family and massive limitations on our lives.

August of 2014 saw us hit a particular low point when [redacted] seizures became worse despite being on maximum doses of four anti-epileptics, one of which we were trialling off-label and was costing us almost \$4000 a month. Each of the drugs have horrible, potential side effects. At this time, [redacted]

was having 6-8 seizures a day, some of which were lasting up to ten minutes and sending her back to sleep for hours.

I was able to obtain a few syringes of 18% CBD Hemp Oil and began her at a tiny dose (approx. 1/6ml twice a day). Within a week [redacted] seizures completely stopped. Now, six months later, we have completely weaned [redacted] off of all her medications and she is currently on approx. 1/3ml twice a day. She has the occasional, very small seizure that probably only my husband or myself would notice. A month ago she started sleeping 9-10 hours a night, unbroken.

As you can imagine, this has been absolutely life changing for all of us. We have been able to explore normal lives and realise the potential in our child.

Going forward we would like to see a day where we can travel freely with the oil in our luggage and not worry about the supply we have in our freezer. I believe it needs to be regulated in some way so as to ensure consistency and continuity of product, and also to help bring the price down for struggling families that are already dealing with so much.

ELIXIR

# EPILEPSY

- IMMEDIATE 50% REDUCTION IN SEIZURES
- DRAMATIC IMPROVEMENT IN SLEEP

MALE CHILD - USA

seems to be responding well. We have seen about a 50% reduction, some days are better than others. I think I am having a little trouble with getting the exact amount of the paste out each time, even with the lock, but it's about the same. I did up it yesterday, so hoping to gain a little more control with the small increase (I would say a little

more than a pea size amount). I know we are getting a discount, but I'm afraid to use too much because of the cost at this point. I am aware that all CBD costs a good bit. I will keep you updated in the next week and let you know how he is after a week or so with added amount.

# EPILEPSY

- 100% SEIZURE REDUCTION
- IMPROVED COGNITION AND MENTAL DEVELOPMENT
- IMPROVED PHYSICAL STRENGTH AND AGILITY
- ABLE TO COME OFF ALL PHARMACEUTICAL MEDICATIONS

10 YEAR OLD FEMALE - AUSTRALIA

has a rare genetic condition; (CDKL5), which presents as severe intellectual and physical disability and uncontrollable epilepsy.

has been on a range of currently available Schedule 4 pharmacological anticonvulsants including Zonegran; none of which have controlled life threatening seizures, and all of which come with significant side effects, which have the potential to cause significant neurological and physical damage. seizures are so severe that I was told there was no treatment, and it was likely that would die as a result of the seizure activity; a fear we have lived with each day for nearly 9 years.

Since commencing THC based tincture in February, overall health and wellbeing has improved and her seizures have

been reduced; only occurring in small clusters when she is unwell.

Since early October of this year I stopped using the THC based tincture and started on Elixinol high CBD Hemp oil. The immediate results are undeniable. progress intellectually, physically and in relation to her seizure management has far exceeded my expectations. A small amount of Elixinol has been able to bring seizures down to zero and there have been no adverse side effects.

She is now off all pharmaceutical medications and continues to progress mentally and physically. She can now sleep a full 12 hours, get out of bed by herself without help and shows signs of happiness and improved mental development.

# PAIN & ANXIETY

- TOTAL CONTROL OF PAIN
- TOTAL RELIEF FROM ANXIETY
- ABLE TO COME OFF ALL PHARMACEUTICAL MEDICATIONS

ADULT FEMALE - AUSTRALIA

began taking Elixinol after shoulder surgery. Was in a lot of pain and pain killers weren't really working plus making her feel terrible.

Went off all pain killers the day after starting on Elixinol. Pain now under control. Plus she has noticed it really helps increase energy levels and stops anxiety.

# PAIN

- CONTROL OF PAIN
- 95% REDUCTION IN NEED FOR OXYCONTIN (EXTREMELY ADDICTIVE)

ADULT MALE - USA

During the week I was on CBD (I rolled what I had into 7 black beans the size of a small pea) I was easily able to "get by" on 2 of my 40mg oxycontin. I think I can say I was just as comfortable with this combination. But once it was gone my regular need had to be met and within 1-2 days I was back on my usual dose of 40 oxycontin. So I reduced

my dose, yes but was it sufficient to be cost effective - No. Not at today's costs. When the price of CBD gets competitive with narcotics, CBD will take over the market.

Dr. Duane Graveline MD MPH - **NASA scientist and USAF physician**

# THYROID CANCER

- REDUCTION IN TUMOR SIZE
- REDUCTION IN SWELLING

ADULT FEMALE - AUSTRALIA

began taking Elixinol for a tumor on her thyroid. Inflammation in neck and face has decreased significantly. The tumor has changed in texture and shape becoming

smaller and softer. has kidney disease so is sensitive to any medication. She's up to about 1/4g once a day and getting some good results.

# PANCREATIC CANCER

## - TOTAL CONTROL OF PAIN

---

ADULT FEMALE - AUSTRALIA

has pancreatic cancer. She is very sensitive to medication. Can't take pain killers so is taking Elixinol instead. Taking a tiny amount (like a grain of rice) but even this small

dose has pain under control. She is going to increase dose very slowly in the hopes of it having some impact on cancer too.

# EPILEPSY

## - 100% SEIZURE REDUCTION

## - IMPROVED COGNITION AND SOCIAL INTERACTIVITY

---

7 YEAR OLD FEMALE - AUSTRALIA

Prior to having the CBD Oil seizures were slowly starting to creep in last week - she was having myoclonic jerks. Since starting on Elixinol she has had no seizures but did have some diarrhoea, may or may not be related to starting on the CBD.

The main reason we are using the product is to treat her ESES also known as CSWS. That particular seizure activity is subclinical and has the most effect on her language and her development. Since being on CBD oil I have noticed my daughter is more able to express herself - she was telling me her stomach was sore whereas usually she would not have been able to do this.

# MULTIPLE SCLEROSIS

## - IMPROVED MENTAL CLARITY

## - REDUCED MUSCLE SPASTICITY

## - IMPROVED AGILITY

---

ADULT FEMALE - USA

We completed our first syringe today. At first I noticed more detailed and dramatic dreams....not nightmares. I sense however that consuming the CBD oil for the last 3 weeks has helped me in the following ways: (1) Improved mental clarity. (2) Increased ability to 'continue/complete' writing letters, computer-based projects, filing.

(3) Reduced spasticity in my right foot (the side with less spasticity) so that when I was on the treadmill, I could bend my foot when it was behind me and get better toes up as I brought it forward and landed. (4) Improvement in my left hand spasticity....noticed greater typing ability.

# BRAIN INJURY

- IMPROVED SOCIAL INTERACTIVITY
  - IMPROVED COORDINATION AND AGILITY
  - MORE ENERGY AND STAMINA
- 

ADULT FEMALE - USA

Great news. I saw Dr. Ange this afternoon. I took my CBD right before I saw her. She was very excited about the changes she sees in me - she has known me 13 years -- before my injury. She said my entire demeanour was different. She said I was more fluid and spoke with less effort. I moved and walked with more ease and looked more natural. I didn't clomp and keep my legs a part while walking. I had a lot of energy and wasn't whipped/exhausted after spending 90 minutes with her - my norm.

She said that since my injury I have set back in the chair in her office, either holding my hands or folding my arms over my chest. Today I sat on the edge of my chair, was more animated and talked with my hands and wiggled my fingers like-- something she remembered me doing before my injury.

She also said my brow wasn't furrowed at the end. When I left her office my body (CNS) was not

humming like usual -- usually felt like a motor running in my CNS. I was still relaxed. I still had energy and walked out without help. Normally she'd walk me to my car to make sure I didn't lock up or fall.

She wants me to continue to withdraw the Klonopin slowly. She commented it's been amazing how far I've already come, and now I've found something that may help me even more. She agreed with all of my reductions and wants me to go see my family physician, who is also progressive. She said she'll support me and be interested too.

I shared some of this with my husband, and he had forgotten how I talked with my hands. He's pleased that she has observed things he hasn't. I wrote all the above, so I could remember, and add it to my journal. I'm sure there were other things she noticed that will come to me.

# DEMENTIA

- IMPROVED ALERTNESS AND MEMORY
  - IMPROVED SOCIAL INTERACTIVITY
- 

ADULT FEMALE - USA

is a 77 yo woman with dementia. For 4 years she stopped answering the phone and withdrew socially. She was unable to cook, burning food, forgetting pots on the stove and unable to keep track of who wanted what.

After CBD she became alert and social once again. She returned to cooking for the family with great skill and to the delight of the members, recalling her previous recipes and special orders in full detail.

She is now active and vigorous.

# OVARIAN CANCER

- 100% REDUCTION IN TUMOR
- IMPROVED COORDINATION AND AGILITY
- MORE ENERGY AND STAMINA

ADULT FEMALE - USA

Thank you for bringing me and my wife such a wonderful medicine. My wife was recently diagnosed with stage 4 ovarian cancer. She had a potato-size tumor in her abdomen, along with carcinomatosis of the liver, spleen, intestines and omentum.

The prognosis wasn't good, but she was immediately started on Carboplatin and Taxol. I also started her on pills I made of Elixinol CBD oil and turmeric, administered twice a day.

Fast forward three and a half months later, and her surgery was scheduled to remove the tumor and other cancer that had spread in her abdomen. To the doctor's surprise, there was no cancer left. The "sprinkles" of cancer and the tumor had all but disappeared! Stage 4 cancer to nothing in about 3 months. The doctors were speechless.

Your product helped to save my wife's life. I can't thank you enough. I have, and will continue, to recommend your product to everyone I know.

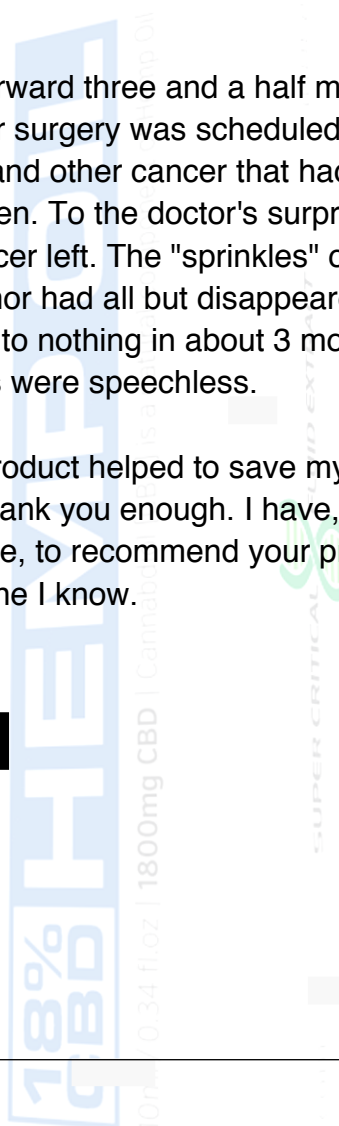

# PAIN & DEPRESSION

- IMPROVED MOOD
- IMPROVED SLEEP
- IMPROVED MENTAL CLARITY
- IMPROVED AGILITY

ADULT MALE - USA

is a 55 year old musician who has been fighting depression most of his life and is currently on an standard anti-depressant with good control but he does have side effects that impacts his music and caused a large weight gain. He tried to discontinue the drug but relapsed after a week with severe anxiety. A past marijuana user he did not like the psychoactive effects but he was interested in trying CBD. After three days on Elixinol he reported increased energy, productivity, improved sleep and an uplifted mood. As a

professional trombone instructor and band leader he also noticed his hands were more limber and showed less fatigue. His recent performances have been excellent and very enjoyable. He feels that the CBD has helped him integrate his thoughts and ideas into practical action steps with improved clarity. His enthusiasm was palpable as he outlined his future plans and formulated new ones. He plans to reduce and eliminate his anti-depressant carefully watching for relapsing symptoms under his psychiatrist direction.

# PAIN & TREMORS

- REDUCED PAIN
- IMPROVED SLEEP
- REDUCED TREMORS

## ADULT MALE - USA

J is an 84 year old former jet pilot, with severe essential tremor started on CBD about 3 months ago. He began with Elixinol CBD oil for the purpose of controlling a severe essential tremor. He found the flavor objectionable and it did not help immediately or after a couple weeks. Four weeks ago he started using an inhalation technique e-cigarette style. This time he noticed some immediate subtle benefits in his pain, sleep and energy so he elected to continue using the CBD this time.

In addition, he is visually impaired from a retinal vein thrombosis last year. And, the bank helps him balance his checkbook and write checks because his tremor is so bad it looks like a seismograph recording. But, at his most recent visit the assistant asked him what he had done to control his tremor. Nothing, as far as he knew but she pointed out his dramatically improved handwriting. At which point he realized that the CBD had slowly and effectively improved his tremor over the month period in addition to the other ongoing benefits.

# DEMENTIA + PTSD

- IMPROVED SOCIAL INTERACTIVITY
- IMPROVED STRENGTH AND ENERGY
- REDUCED TREMORS
- IMPROVED COGNITION

## ADULT MALE - USA

is an 82-year-old disabled, Korean War veteran with dementia, PTSD, diabetes mellitus with neuropathy and a familial tremor. A year ago he sat all day in a chair with little interaction and hardly speaking. One month ago he began cannabidiol (CBD). Now, his strength and energy improved, his tremor calmed and his cognition cleared. He's telling Korean War stories, not previously told, with vivid detail. He's walking and driving without assistance, independently handling

personal business matters with clarity and maintaining a joyful mood. Dr. Blair comment: CBD appears to have initiated broad systemic improvements physically, metabolically and cognitively rapidly with no apparent adverse effects...I spoke with today. He thanked me for providing the CBD that allowed him to be "reborn". He appreciated coming back from being a "vegetable".
