

Dear Sir or Madam,

attached our witness statements to the subject WTS, wildlife- avifauna, pets, quality of life.

We have turned 2 videos for the International Symposium in October, 2010 in Ontario, Canada about affected local residents of wind turbines (about our own situation after nearly 16 years beside 6 wt, next 320 m away from our house, today 113 wt visible from our property and about friends who live beside other WT) and an interview with an other affected person in Schleswig-Holstein, the most northern land in Germany. The films (English) you find here:

http://www.windwahn.de/html/picton_ontario.html

Moreover, attached we send the translation of a letter of an affected and ill family in Lower Saxony living nearby the biggest wt by Enercon, which we received in May, 2010 to our anti wt rally in Berlin.

The following link points to the illnesses of citizens in Belgium shortly after the construction of the biggest wt of the world (Enercon):

<http://www.epaw.org/multimedia.php?lang=en&article=n2>

More submissions from Europe you find on the website of EPAW(European Platform Against Windfarms):

<http://www.epaw.org/victims.php?lang=de&article=t3>

We are glad that you take the subject WTS seriously in Australia. In Germany it is not possible to bring the subject Infrasound and Low frequency issues by wind turbines in the public because this is neither politically nor economically wanted.

Although a lot of people have fallen ill for a long time with WTS (in Germany there are wind turbines since the end of the eighties), every kind of illness caused by wt is denied, as well as the destruction and expulsion of the biodiversity of avifauna.

Wind turbines are an ecological and health disaster. Please preserve Australia's nature and citizens from these symbols of greed and destruction!

Yours sincerely

Jutta Reichardt
