TO WHOM IT MAY CONCERN

We as Trans Pacific Projects Pty. Ltd. are specialized project forwards and consultants and one of our major areas of expertise is the logistical handling and management of all transports necessary for the erection of a wind farm. Due to the fact that we are involved in the wind farm logistics, we have created several new jobs within our company in the past years as well have supported local trucking companies with orders and supported local businesses in the areas were the wind farms were / are being built, by either hiring locals and by supporting local business and services (e.g. accommodation, catering, fuel, etc.) with our specialists being on site for the duration of the projects.

The wind farm division is a vital and absolutely important part of our business account for a significant portion of turnover and profitability of our company.

Sincerely

Peter Leitner
(Managing Director)
