

Dear Senate Committee,

It is time all Govt. subsidies to fossil fuel & mining interests went into renewable energy sector.

It is totally ridiculous that we spend so much of our collective taxes on these destructive practices that are fueling climate change.

I want the mining tax extended to the point where the resources are truly valued. At the moment recycled steel gets no money so becomes landfill. All products need to be recycled.

It is time we ramped up the industrial hemp industry to replace all cotton & wood paper pulp, this would save us so much water & reduce the need for toxic chemicals straight away.

We must make these changes as a start to a more sustainable future because we are too close to runaway climate change.

Yours sincerely, Ian Rose
