Contact: Mr Ashley Wells, Policy Director

March 2015

OVERVIEW

The FCAI welcomes the opportunity to respond to the Senate Committee's inquiry into the Future of the Australian Automotive industry.

The FCAI is the peak industry organisation representing vehicle manufacturers and importers of passenger motor vehicles, SUVs, light commercial vehicles and motor cycles in Australia.

The Terms of Reference for this inquiry examine the broad state of the automotive industry, from manufacturing to retail and services. This submission seeks to provide an overview of the industry, with a specific focus on automotive manufacturing. The FCAI will make a final submission to the Inquiry in accordance with the timeline set out by the Committee.

The Australian automotive industry makes a significant contribution to the Australian economy. It is a \$74 billion retail industry, selling 1.1 million motor vehicles each year through more than 4,700 dealerships. The industry contributes \$6.4 billion in taxes and other charges to Government revenue each year.¹

A HIGHLY COMPETITIVE RETAIL INDUSTRY

The FCAI considers that the Australian car market is one of the most competitive in the world. For a relatively small market that comprises only 1.5 per cent of global production Australia has around 67 brands and 400 models competing for around 1.1 million sales.

This has come about for a number of reasons. Principally, as the tariff barriers on automotive products have reduced from 57.5 per cent in the 1980s to an effective tariff of between 3 and 4 per cent and the number of vehicle brands and models in the Australian market has increased. As Australia enters into more free trade agreements, this average tariff level will continue to lower. The recently concluded FTAs with Japan and South Korea, for example, will contribute to the effective lowering of that average tariff significantly, given the volume of motor vehicles sourced from those two countries.

Table 1.1 Competitiveness of Global Markets²

	Australia	Canada	UK	USA
No. brands in market	67	49	53	51
Sales	1,112,032	1,620,221	2,249,483	13,040,632
Market size per brand	16,597	33,066	42,443	255,699

¹ Whytcross, D. Motor Vehicle Dealers in Australia. IBISWorld Industry Report G3911, 2014. IBISWorld.

² Australian Government, Department of Industry, Innovation, Climate Change, Science, Research and Tertiary Education, March 2013 Automotive Update.

Table 1.1 demonstrates the competitiveness of the Australian market through a comparison with Canada, the United Kingdom and the United States. Australia has more brands offered for sale than these other three markets. There are double the number of vehicles sold per brand in Canada, almost three times as many in the United Kingdom and more than 15 times the number of vehicles sold per brand in the United States than in Australia.

Figure 1.1: Vehicle Ownership per 1000 inhabitants³

Figure 1.2: Vehicle Ownership Rates for Regions⁴

³ Organisation Internationale des Constructeurs automobiles (OICA), Total World Vehicles In Use, www.oica.net, [accessed 26 September 2014]

⁴ Organisation Internationale des Constructeurs automobiles (OICA), www.oica.net, [accessed 26 September 2014]

Figures 1.1 and 1.2 show vehicle ownership among a selection of countries demonstrates that Australia has among the highest ownership levels of vehicles with an ownership concentration of 713 vehicles per 1000 inhabitants. In comparison, the United States has ownership levels of 791 vehicles per 1000 head of population, NZ is at 646, Canada is 624, and Japan, the United Kingdom and Germany are all below 600 vehicles per 1000 head of population.

While this competition has been good news for consumers, it has contributed to tougher times for Australia's domestic manufacturers, with around 180,000 motor vehicles produced domestically in 2014 (down from 325,000 in 2008). The fragmented nature of the Australian new car market has meant that achieving volume for any one brand or model is difficult. While Australian manufactured motor vehicles continue to occupy two of the top ten sales spots, in an industry where economies of scale are critical in achieving cost competitiveness, this lack of volume presents an overwhelming hurdle for the domestic industry, both in itself and in flow on to major parts makers. This is dealt with in more detail below.

The impact of the global financial crisis on the car industry has also been a significant contributor to the state of Australia's domestic car industry today. The financial crisis provided a significant shock to the automotive industry globally, with demand dropping significantly. The crisis led several manufacturers into bankruptcy and many others to the brink of bankruptcy. It directly resulted in the demise of the Pontiac brand in the United States (and through it the demise of Holden's substantial export program at the time to the US) and it further contributed to the global surplus of motor vehicles.

These developments precipitated major restructuring and rethinking in the industry. Around the world, many factories have closed and continue to do so as manufacturers look to rationalise across their global manufacturing operations. The industry has also consolidated model types through greater focus on global model platforms that are sold on a world-wide basis. Global models allow automotive manufacturers to focus their research and development expenditure on a smaller range of models.

The Australian automotive manufacturing industry has not been immune from these global developments.

DOMESTIC MANUFACTURING

Australia currently has three motor vehicle manufacturers building passenger cars in Australia. Ford, Holden and Toyota each have substantial investments in manufacturing facilities. Unfortunately, each of these companies has announced their departure from manufacturing. These decisions were taken for a variety of reasons, namely:

- changing preferences of Australian consumers, including a shift to smaller cars as well as SUVs and light commercial vehicles.
- increased competition by emerging economies for automotive investment;
- increasing sophistication of non-tariff barriers in export and potential markets;
- increased competition from imports due to non-reciprocal trade liberalization, leading to significant market fragmentation with more than 67 brands in a new car market of around only 1.1 million sales each year;
- by global standards, high manufacturing input costs (power, gas, labour, freight etc); and

- insufficient manufacturing scale to offset high investment costs.

Notwithstanding this, the Australian automotive industry remains one of Australia's most advanced industries. It deploys advanced manufacturing techniques, technologies and adds value through the broader economy far beyond its manufacturing core.

As part of its response to the 2013/14 Productivity Commission inquiry into the Australian automotive industry, the Federal Chamber of Automotive Industries commissioned economic analysis by Monash University's Centre of Policy Studies and research by the Allen Consulting Group to identify the value of this investment. That research forms the basis of this submission and is attached. It found that for this investment, the Australian economy is \$21.5 billion larger (based on an economic welfare net present value calculation) for having an automotive manufacturing industry. On a per capita basis, Government assistance to automotive manufacturing is around \$18 per person — a very low figure by international standards. The \$21.5 billion return equates to \$934 per person. This amount consists of the combination of direct foreign investment that is made into Australia's automotive manufacturing sector and the economic activity this in turn generates. This figure excludes the significant benefit provided by the eco-system function that Australian automotive manufacturing provides to other parts of the economy.

The regional economic impact modelled for this study also found that it affects all States, with considerable consequences for Victoria and South Australia in particular. In simple terms, the operational and component spend of domestic automotive manufacturers in Melbourne in 2013 amounted to around \$2.25 billion, \$629.84 million in Adelaide and around \$159 million in Sydney. This investment supports many small and medium sized enterprises throughout the supply chain, many of which are contained in Appendix C of the attached Allen Report.

This is significant economic activity in its own right. The economic modelling prepared by the Centre of Policy Studies highlights that the economic activity generated by automotive manufacturing means that Gross Regional Product in Melbourne is 1.4 per cent larger and nearly 1 per cent larger in Adelaide in 2018 than it would be if automotive manufacturing were to leave the country. There are also nearly 40,000 more jobs combined as a result of automotive manufacturing in 2018 compared to a scenario where automotive manufacturing ceases.

The investment made in automotive manufacturing also delivers significant additional returns throughout the broader economy, including:

- technology transfers through R&D, and innovation;
- lean management techniques and applications; and
- advanced labour skills and manufacturing techniques.

THE AUTOMOTIVE INDUSTRY IS AN INNOVATION INCUBATOR

These skills and the innovation that is endogenous to the industry deliver further benefits to the broader economy, magnifying their value, and the value of government assistance. While difficult to quantify, these spillovers are well-recognised through the broader economy. Such spillovers benefit the economy in ways that are clearly recognized by industry leaders around the nation. These

include chief executives of companies like Boeing, BHP Billiton, Rio Tinto and Coca-Cola Amatil, each of whom have directly related the success of their own businesses to the skills and expertise gleaned from the automotive industry in Australia.⁵

The Australian Government has also recognized that the automotive industry benefits the broader economy through its extensive linkages into other parts of the economy like heavy engineering, tool making, aerospace and marine.⁶ Many of these stretch across related industries, like defence and even into the services sector such as banking.

This strong focus on innovation has been greatly assisted by the international linkages the domestic automotive industry maintains. The Australian automotive industry is replete with highly skilled designers and engineers involving high-value and high-technology practices. The major car companies, notwithstanding their decisions to cease automotive manufacturing in Australia by the end of 2017, have designers and engineers who work on global projects for their parent companies. These operations exist in very few locations around the world; they exist in Australia because the expertise of the people involved and the high regard in which they are held throughout their parent companies. In other words, we have an advanced innovation capability, which has developed in part because of the assistance provided by successive federal governments.

This focus on innovation has extended into other parts of the economy. In particular by the very strong links the domestic automotive industry has developed, and maintains, with the Australian university sector. The domestic industry has developed strong working relationships with the University of Melbourne, Deakin University, the Royal Melbourne Institute of Technology and the Australian National University. These universities provide not just graduates and the necessary technical skills for the industry, but they also provide an important conduit to the research community and the economy more broadly for technologies commercialised by the automotive industry.

Arguably, it is the innovation provided by the industry to the broader economy that is of greatest value to a country like Australia. Innovation is central to automotive manufacturing and design. According to the Organisation of Motor Vehicle Manufacturers, OICA, the global automotive industry invested almost €85 billion in R&D in 2005.⁷ In Australia, while the manufacturing sector spends the largest amount on business R&D (\$4.8 billion or 26.6 per cent of total business R&D spending in 2010-11), ABS data shows that nearly \$700 million was invested in R&D in motor vehicles and parts in 2010-11. This includes around \$480 million for motor vehicle manufacturing alone.⁸

Indeed, innovation in the automotive industry is seen as central to an advanced economy around the world. Out of the 20 countries in the G20, only one currently does not have automotive manufacturing. Those countries have seen automotive manufacturing as a strategic investment and all provide significant assistance to their local automotive industries in a range of ways.

THE ROLE OF GOVERNMENT ASSISTANCE

Historically the Australian Government has seen value in supporting the development of the automotive industry through a variety of funding and structural assistance mechanisms. The Automotive Transformation Scheme (ATS) is the latest incarnation of this assistance, providing capped funding of \$300 million per year (2011-2017) to encourage competitive production, investment and innovation in the Australian automotive industry. Prior to this, the Australian Competitiveness and Investment Scheme (ACIS) also provided an effective mechanism to encourage and nurture investment in automotive R&D.

It is with the assistance provided by programs like the ATS that the automotive industry has been able to develop in Australia. The modest level of assistance provided by both Coalition and Labor Government's has acted as a catalyst for investment by global brands in Australian automotive industrial design and engineering capability. This has also extended to the domestic supply industry, which has grown in support of the domestic automotive manufacturing. Today, both the domestic car manufacturers and the supply chain consist of highly trained and professional engineers and designers that produce advanced equipment and technology for use in the manufacturing process.

This assistance has helped Australia to become one of only a few nations in the world with the capability to produce a car from concept to delivery. The Australian automotive industry today competes globally and designs, engineers and manufactures a complete range of automotive components including body and chassis systems, electrical and control systems, drivelines, interiors and aftermarket accessories.

Despite the decision to cease motor vehicle manufacturing in Australia by the end of 2017, the FCAI argues that the ATS continues to provide essential assistance to support the transition of the automotive industry through one of Australia's most significant industrial re-adjustments. Amending the ATS funding profile prior to the cessation of vehicle manufacturing in Australia will increase the likelihood of an uncontrolled collapse of the automotive supply chain, and puts at risk the continued operations of highly skilled and innovative businesses that form a strategic part of Australia's industrial backbone.

Due to the interdependence of the automotive sector, all industry participants must continue operations up until the closure of vehicle manufacturing or risk an accelerated industry shut down. Any amendments to the current funding levels, such as those contained in the Government's proposed ATS amendment legislation, may result in unintended impacts on all ATS participants and will not provide the industry the time to adjust and in some cases diversify into other industry sectors.

THE AUTOMOTIVE TRANSFORMATION SCHEME

The Automotive Transformation Scheme is a legislated entitlement scheme that is designed to encourage competitive production, investment and innovation in the Australian industry. The ATS provides assistance to registered participants for investment and production. Eligible participants receive assistance for:

- production of motor vehicles (MVPs only)
- investment in research and development to a maximum rate of 50 per cent
- investment in plant and equipment to a maximum rate of 15 per cent.

The three domestic motor vehicle manufacturers (Holden, Ford and Toyota) as well as companies in the supply chain, are eligible to apply for assistance under the scheme.

The ATS consists of two funding stages. The first stage runs from the period beginning on 1 January 2011 and ends on 31 December 2015. The second stage runs from the period beginning on 1 January 2016 and ending on 31 December 2020.

The Automotive Transformation Scheme Act 2009 states at Division 2 – Assistance (p.7), that:

- (1) The total amount of capped assistance under the Automotive Transformation Scheme must not exceed:
 - (a) for stage 1 - \$1.5 billion; and
 - (b) for stage 2 - \$1billion

The ATS legislation specifies that the total amount of capped assistance paid must not exceed \$300 million in a calendar year. If the total amount of capped assistance paid in respect of a particular year is less than \$300 million then the balance may be paid as capped assistance in respect of any later year within the relevant stage (ie, within stage 1 or within stage 2). This assistance cannot be paid on or after 1 April in the following year.

The ATS operates on a calendar year basis. Division 3.2 (Caps on Scheme and ATS participants) of the ATS Regulations specify the capped assistance schedule.⁹

3.9 Capped assistance for ATS years

Subject to section 8 of the Act, for each ATS year of the Scheme listed in the table below, the Secretary must not make a payment of capped assistance that in total exceeds the amount specified for the ATS year (the ATS year cap).

ATS year	ATS year cap (\$)
1	300 000 000
2	300 000 000
3	300 000 000

⁹ http://www.comlaw.gov.au/Details/F2013C00256/Html/Text#_Toc356480174

ATS year	ATS year cap (\$)
4	300 000 000
5	300 000 000
6	300 000 000
7	300 000 000
8	216 700 000
9	133 300 000
10	50 000 000

Note 1: Subsection 8(1) of the Act provides that total capped assistance under the Scheme must not exceed \$1.5 billion for stage 1 and \$1 billion for stage 2.

Note 2: Subsection 8(3) of the Act allows payment of unspent capped assistance in a different ATS year in some circumstances.

Capped assistance divided between motor vehicle producers (MVPs) and others is also specified in the regulations. The ATS year cap for capped assistance for an ATS year set out in regulation 3.9 must be divided as follows:

- (a) MVPs—55% of the ATS year cap;
- (b) ACPs, AMTPs and ASPs—45% of the ATS year cap.

WHAT DO THE FEDERAL GOVERNMENT'S CUTS TO THE ATS MEAN?

The Australian Government has made three announcements regarding the reduction of ATS funding, including:

1. Mid-Year Economic and Fiscal Outlook (December 2013) - ATS funding reduction of \$500 million from 2015-2017.
2. Federal Budget (May 2014) - Closure of ATS on 1 January 2018 (saving a further \$400m).
3. ATS Amendment Bill (September 2014) – Legislation to enact the announcements above

1. MYEFO cuts

There is currently \$1.3 billion allocated for 2015-2020. This includes \$300 million in 2015 and \$1 billion from 2016-2020 (see Attachment 2).

2. Budget cuts

The Australian Government announced in the 2014 budget that it will close the ATS program on 1 January 2018. This will generate a further saving of \$400 million by removing all funding from 2018-2020.

3. ATS Amendment Bill

The ATS Amendment Bill gives effect to the Government's decision to cut ATS funding by \$500 million between 2015 and 2017 and to cease the scheme from 1 January 2018. This means that in total \$900 million will be cut from the \$1.3 billion allocated from 2015 to 2021 (see below).

ATS Calendar Year	2015 (\$m)	2016 (\$m)	2017 (\$m)	2018 (\$m)	2019 (\$m)	2020 (\$m)	Total
Capped Funding as Currently Legislated under ATS Regulation 3.9	300.0	300.0	300.0	216.7	133.3	50.0	1.3b
Less MYEFO + Budget announcement Savings	200.0	150.0	150.0	216	133.3	50.0	900m
Capped Funding After MYEFO Savings (and subject to legislative amendment)	100.0	150.0	150.0	0	0	0	
Funding reduction	66%	50%	50%	100%	100%	100%	

The FCAI opposes both the \$500 million reduction to the ATS funding profile, and the ceasing of the scheme from 1 January 2018, particularly at a time of substantial ongoing structural adjustment in the industry. Given that all three domestic automotive manufacturers have announced they will cease automotive manufacturing in Australia by the end of 2017, there is an urgent need by Government to assist the orderly transition of the automotive supply chain into other parts of the economy.

As currently drafted, the proposed ATS cuts will limit the ability of the industry, particularly the component suppliers, to commence their transition to a post-automotive manufacturing environment. The FCAI is particularly concerned that the proposed \$200 million cut in calendar year 2015 will simply mean that many suppliers will not be able to continue their operations, let alone seek to diversify out of automotive supply and into other areas of the economy.

Specifically, business viability will be impacted where ATS participants have made investment decisions in 2013-14 which due to the averaging of ATS funding across the following three year period (12 equal instalments) the expected benefit will be reduced.

This assistance is essential to the industry in Australia and to supporting the jobs of many thousands of employees. If allowed to pass through the Parliament, these cuts will have a potentially detrimental impact on the operations of the three domestic car manufacturers and the many businesses in the supply chain that support them, and will take away their opportunity to transition out of automotive manufacturing and into other parts of the economy.

If implemented, we are of the view that this has the potential to bring about an early closure of the entire automotive industry. The ATS program is now more important than ever in assisting supply chain companies to an environment without local vehicle manufacturing.

It is therefore crucial to help those companies innovate into other product and business streams. The ATS can assist in this important transformation.

THE FUTURE OF AUTOMOTIVE INNOVATION IN AUSTRALIA

The FCAI remains optimistic that an orderly transition out of domestic automotive manufacturing will not mean the end of Australia's advanced engineering and manufacturing capabilities. However, sensible government support through this period is crucial.

While it is regrettable that automotive manufacturing will cease in Australia, both Ford and Holden have committed to maintaining their significant design and development facilities in Australia. These are important facilities for Australian industrial design and automotive innovation capabilities into the future. They are also significant businesses in their own right. Holden, Ford and Toyota continue to engage in significant services exports through their design capability, with all three having recently played a lead role in the development of new car models for their respective parent companies.¹⁰ Nissan also maintains a manufacturing presence in Australia at its casting plant and provides a range of advanced componentry for the technologically advanced Nissan Leaf electric vehicle.¹¹

Rather than cutting and closing the ATS, amending the eligibility criteria to facilitate investment in research and development activities to encourage further investment in these, and other, facilities would help nurture complex design and engineering work in Australia, in turn providing significant technical skills for the country. Such amendments would be particularly important as domestic motor vehicle manufacturing winds down in Australia.

Internationally competitive R&D support

Australia can continue to have a valuable link into this important industry through its high-value, innovation-intensive design and product development operations well beyond domestic manufacturing. However, if Australia is to maintain the technical and design advantage it currently enjoys across automotive product development, then as a country we must have consistent, long-term internationally competitive policy assistance.

The automotive industry's competitiveness in attracting global capital is strongly influenced by the level of support, including financial support, provided by the national government. On this measure, Australia is at the bottom of the league table.¹² Eroding this modest level of assistance, by reducing the total amount of financial support or by altering the existing Automotive Transformation Scheme as is currently proposed, increases the level of uncertainty in automotive policy and decreases the attractiveness of Australia as an investment destination.

An important first step as part of this is reversing the Government's current announced intention to reduce the available assistance from 2015 to 2018 by \$500 million, and the closure of the scheme from 2018. This would mean the continuation of the Automotive Transformation Scheme through to 2020. Secondly, the Government needs to make changes to the ATS regulations to allow OEMs to continue accessing funds for automotive R&D once manufacturing ceases.

In the event that the ATS is to be abolished, the FCAI would support a new automotive R&D co-investment policy to maintain and grow the established automotive R&D infrastructure and skills base currently in Australia. Any such replacement program needs to recognise that Australia can be

¹⁰ *The Strategic Role of the Australian Automotive Manufacturing*, p. 39

¹¹ <http://www.themotorreport.com.au/54651/first-australian-made-nissan-leaf-components-shipped-to-japan>

¹² See *The Strategic Role of the Australian Automotive Manufacturing*, p.6

a potential source of design and engineering services for global markets. Establishing Australia as a global centre of excellence for automotive R&D is an achievable objective given the right policy settings and support for academic institutions.

The FCAI trusts that the information contained in this submission assists the Committee's inquiry and the Chamber would be happy to participate further with the Inquiry.

Attachment 2: Automotive Transformation Scheme Act 2009

17 December 2013 MYEFO Announcement

Automotive Transformation Scheme - Legislated Capped Funding Profile by Financial Year - Before and After MYEFO Savings

	2010-11	2011-12	2012-13	2013-2014	2014-2015	2015-2016	2016-2017	2017-2018	2018-2019	2019-2020	2020-2021	Total
