

Community affairs reference committee,

I wish to bring to your attention the adverse effects that are appearing in our community

since the windtowers at Cape Bridgewater became operational, members of my immediate

family have had to relocate because they have had unusual health problems other neighbours

noticed side effects such as sleep deprivation and general feeling of being unwell and are

contemplating moving elsewhere.

My concerns are the fact that although rates in our shire have risen, land values have not,

and windtowers are bringing in rate money which should offset the need for rising the rates

on primary producers in the area. I personally do not have any side effects that I can attribute

to the towers, but then I am going on 72, and one does not know when things might be or not

be normal at my age.

I hope that a proper inquiry can take place to find any problems, which appear to be affecting

our family and the community

I am yours sincerely

John Doyle
