
I understand that the Victorian DLP Senator John Madigan last month introduced a bill to remove Medicare funding for sex selection abortions and this bill is now being considered a Senate Committee.

I would like to put my own submission to the Senate Committee in agreement with this Bill. Being the father of 4 children, I never knew the sex of any of my children before birth and I loved and wanted each of them as they were.

People ask for choice, they want what they believe they should have.
I think we should also have the choice to be responsible and take responsibility.
If our child does not turn out how we want they to be – what should we do then.

Our medical system is not there to help people design their children, it's to nurture them.
Valuable Medicare resources should not be consumed on giving people cosmetic value in their lives.

We as a community are more than that.

We are to help people take responsibility and support them with medical care not to look good.

We are to show in our community that every person is of value and precious, these are the values that we should stand for

And our medical funding should support.

Thankyou for listening to me
