

We are a Swiss association against industrial windmills; Switzerland is now also in the confrontation with this real "desaese" since, 1er January 2009, the State decide to give very important subsidies to this type of energy.

Since, it is like a run for gold ! lots and lots of societies are fighting to have the better places; in the Jura mountain, there are projects for more than 1000 machines; in Switzerland, the wind is not good for wind energy and the territories are much to small. The density of population is very high is our country.

But the societies don't care about it; they just see all the money they can earn; they are buying the politicians and the farmers and the citizens are not informed about what is really industrial windmills.

I apologize for my very bad english !

I do hope this note will be usefull for your investigation.

Best regards
Association les Travers du Vent
Le Coude
