Plea for Pure Proportional Representation

Supplementary Submission

JCSEM - Submission 100

14 April 2014

Anthony van der Craats

- Executive Committee member of the MSYG
- Former Secretary/advisor to the Honorable Evan Walker member for Melbourne Province and Leader of the Government in the Victorian Legislative Council;
- Member of the Australian Labor Party (over 35 years), Former member of the ALP Municipal Executive/Policy Committee.
- National Secretary and a Life member of the Proportional Representation Society of Australia
- Life Member and Former Councillor and member of the Board of Directors National Trust of Australia (Victoria)
- Life Member Alumni and Former Councillor and member of the Board of Directors, Royal Melbourne Institute of Technology

The views and opinion expressed in this submission are my own and do not represent or necessarily reflect the views of member associations.

Droop vs Hare Quota

Team Doyle Disenfranchised: Droop vs Pure Proportional voting

Why do we continue to use the "Droop quota" and in the process disenfranchise a significant percentage of voters?

In the past the adoption of the *Droop quota* allowed us to reach a conclusion in the count without having to distribute preferences to the Nth degree and count every vote. However with the use of computer based technology this justification no longer applies.

$$\text{Droop} = x/(y+1)-1$$
$$\text{Pure Proportional} = x/y$$

By calculating the quota to be " $x/(y+1)-1$ ", as defined by Droop, we are ignoring up to a quota of voters which results in a large percentage of votes being locked up in what is referred to as the "wasted quota".

The effect of the *Droop quota* can be seen clearly by analyzing the 2012 City of Melbourne Council vote. In this case Team Doyle received around 38% of the vote and elected 3 positions yet 8% of voters (It's surplus) was ignored. If the system was a pure proportional count the quota would have been 11.11% instead of 10% and the outcome of the election would have been more representative.

Under the *Droop quota* the Greens managed to elect 2 positions with just 14% of the primary vote and community candidate Kevin Chamberlin on 6% miss out being elected. If the count was pure proportional without the distortion of the Droop quota Kevin Chamberlin would have been elected with the support of Team Doyle's surplus preferences.

Why should Team Doyle's voters be disenfranchised and ignored by being locked up in the discarded quota, why should not the system be fully proportional and each vote of equal value. The current system using the Droop Quota at best can only be described as semi proportional.

The system using the Droop quota becomes even more distorted under the Victorian Local Government count-back rules as the vote that has been left on the table is not taken into account when calculating who or which candidate fills the casual vacancy.

2012 City of Melbourne Primary Preference count (9 Councillors to be elected)

x/y Pure Proportional Representation - minus the flaws

Analysis and recounting of the City of Melbourne "C9" Council elections produces a different result.

If we remove all the distortions that arise through the segmentation, wrong calculation of the surplus transfer value and the method of calculating the quota that was introduced last century back in the times of the typewriter when computer technology was not readily available we would have a true proportionality election. If we divided the number of votes by the number of vacancies (x/y) and allocated each vote a value of one and proportioned out the value of the vote with one single transaction per candidate, no segmentation the results of the election would have been

Order	Candidate	Group
1	LOUEY, Kevin	TEAM DOYLE
2	OKE, Cathy	THE GREENS
3	ONG, Ken	GARY SINGER - JOHN SO MELBOURNE LIVING
4	WOOD, Arron	TEAM DOYLE
5	PINDER-MORTIMER, Beverley	TEAM DOYLE
6	MAYNE, Stephen	STEPHEN MAYNE
7	WATTS, Jackie	MORGAN ELLIOTT- PROSPERITY FOR LIVEABILITY
8	FOSTER, Richard	OUR MELBOURNE
9	CHAMBERLIN, Kevin	SHANAHAN CHAMBERLIN FOR MELBOURNE

Greens candidate, Rohan Leppert would have been excluded.

The system that is currently in place is semi proportional at best and as a result of the method of calculating the surplus transfer value (based on the number of ballot papers as opposed to the value of the vote) the value of some votes increase at the expense of others. It distorts the proportionality of the vote and does not accurately reflect the voters intentions.

The Greens received 15.62% of the primary vote which in pure proportional terms equates to 1.41 quotas.

After the distribution of preferences the Greens second candidate fails to reach quota and is excluded from the count.

If Victoria is to maintain public confidence in the electoral system the results of the election MUST be accurate and MUST reflect the intentions of the electorate. It must be proportional to the vote. Each vote must equal one value.

The flawed and outdated system of counting the vote was designed to facilitate a manual count, back in the days before calculators or computers. With the aid of computer technology and a more accurate method of counting the vote there is no justification to maintain the existing electoral systems.

If we calculated dividends or interest paid on financial transactions the way we calculate the vote our financial system would collapse

over night.
