

Good morning.

That is a mail from a french association against wind farmers.

Our name is " Association de Défense des Collines du Pic d'Estelle" in the south -west of France.

The protection of the landscapes, that they are Australian or French, passes before all the financial advantages of the speculators.

If there is a variation of the temperatures, the solution passes more by energy savings than by installation of wind turbines.

Let us fight at the world level to stop the visual pollution of wind generators.

Good luck for your fight.

Jean-Luc MATHIEU

President.
