Population bibliography

Population related issues were among the most contentious areas of public debate prior to and during the recent election period. Given its enduring and multifaceted nature, the debate on population is likely to be of continuing policy interest to senators and members of the 43rd Parliament.

The Parliamentary Library commissioned a series of papers from leading authors on a range of aspects of population including the environment, the economy, demographic trends, public opinion, urban transport and international comparisons. The views expressed in these papers do not reflect an official position of the Parliamentary Library, nor do they constitute professional legal opinion.

To complement these papers, the Parliamentary Library has prepared this bibliography, which is designed to encompass a range of views on different aspects of the population debate.
