

Figure 11.2 Location (in green) of plantation land included in the afforestation/reforestation account

11.5.1.2 Identification of regeneration of native forests as afforestation/reforestation

It is estimated that there were approximately 5.87 million hectares of land which was not forest on 31 December 1989 (and was not forested at any time between 1972 and 1989), which was subsequently converted to forest land through natural regeneration and remained forest.

All lands in South Australia, Tasmania, Victoria and Western Australia have been identified as subject to land clearing restrictions. In Queensland, lands mapped as high value regrowth under the *Vegetation Management Act 1999* and land that is included in the Collaborative Australian Protected Area Database (CAPAD) is considered protected. In the remaining jurisdictions (Australian Capital Territory, New South Wales and the Northern Territory) further analysis of land clearing regulations is required to include all protected lands. In NSW, in particular, the area identified as protected is likely to be a significant under estimate. The focus of current analysis is to improve the estimated area of protected land in New South Wales.

Carbon abatement projects of the Australian Government's Emissions Reduction Fund are also spatially identified and included in the protected lands irrespective of their presence in or absence from other identified protected areas.
