

Ten Network submission to the Environment and Communications Committee Inquiry into the Broadcasting Legislation Amendment (Media Reform) Bill 2016

23 March 2016

Introduction

Ten Network (Ten) supports the *Broadcasting Legislation Amendment (Media Reform) Bill 2016* (the Bill) which repeals the 75 per cent audience reach rule and the '2 out of 3' cross-media ownership rule currently in the *Broadcasting Services Act 1992* (BSA).

Removing these outdated media laws is an important first step in dismantling a set of regulations that are making Australian media companies less competitive in a global, converged media market.

By limiting Australian media companies' access to scale, capital and cross-platform growth, the current media ownership rules are also threatening the ongoing viability of a strong Australian voice and threatening diversity in this market.

When the media regulatory framework was enacted the 'princes of print and the queens of screen' operated across three defined, easily regulated, and highly influential platforms: printed newspapers, free-to-air terrestrial television channels, and free-to-air terrestrial radio stations, which were limited in number.

In today's fully converged media market where someone in Perth can watch video embedded in an online news article on a Sydney news site, or watch a drama program on a television set in a lounge room in Adelaide that has been streamed over the internet by a US broadcaster without any employees in Australia, these traditional platform-based regulatory restrictions are clearly absurd.

Ten is now competing directly for viewers and advertisers against billion dollar global internet companies that are exempt from local media regulation, don't pay television licence fees, pay minimal corporate tax despite taking billions in advertising revenue in this market and, in some cases, don't have a single local employee.

In a fully converged media market we are yet to see any cogent argument as to how the two out of three rule remains relevant or effective in protecting diversity by constraining three offline platforms while ignoring the existence of the Internet and the powerful and influential online players now operating in this market.

[Removal of both the ownership rules and the broadcasting tax is urgently needed to maintain a strong Australian voice and protect diversity](#)

Commercial free-to-air broadcasters currently pay **4.5% of gross revenue** to the Government as an additional "broadcast tax" on top of normal corporate taxes and in addition to meeting onerous and increasingly expensive Australian content obligations. This is by far highest free-to-air television licence fee in the world.

This strange tax was introduced in the 1950s as a “super profits tax” reflecting the fact that free-to-air spectrum granted exclusive access to TV sets across the country which allowed broadcasters to generate healthy profits. Clearly, that spectrum no longer provides any exclusive access to any screen and yet Ten must continue to pay this ‘super-profits tax’ even when not making a profit.

Today the extremely high cost of meeting onerous local content obligations is unique to commercial free-to-air networks and justifies the allocation of spectrum that is used to provide a free service to 24 million people.

The cost of Australian content has escalated dramatically in recent years while free-to-air advertising revenues remain flat. This is causing immense pressure on free-to-air broadcasters’ ability to make expensive Australian content and dedicate funds to innovation.

Removing the licence fee in addition to removing outdated ownership regulations would allow Ten to invest millions of additional dollars in local content which would, in turn, drive additional investment and jobs in the local production sector.

Commercial free-to-air broadcasters underpin Australian content production

Commercial free-to-air television is by far the largest contributor to domestic content production in Australia and underpins the entire production sector. It is vitally important to local production therefore that regulation does not impede the broadcasters’ ability to transform their businesses in response to the structural challenges brought about by digital disruption.

Commercial free-to-air television broadcasters:

- Spend over **\$1.5 billion** annually on domestic programming;
- Fund **six in every 10** dollars of local production;
- Employ over **15,000** people directly and indirectly around the country;
- Provide a vital **training ground** for people in the industry both on and off-screen. Almost every one of the Australians succeeding in Hollywood and other markets today started out on free-to-air TV; and
- Provide year round employment for hundreds of production industry professionals both on and off-screen on long-running popular serial dramas such as *Neighbours*.

Ten alone broadcast:

- Over **161 hours of first release Australian drama** in 2015;
- Over **8,000 hours of Australian content** (6am-midnight) in 2015; and
- Over **54 hours of locally produced news and current affairs programming each week** which equates to approximately 2800 hours of local news and current affairs programming each year.

Addressing the exorbitant television licence fees in addition to updating media laws is essential if Australia is to continue to have a vibrant, diverse and competitive Australian media industry going forward. These changes are critical and urgent if we want to retain local voices in our media and a local content production industry.

Diversity and the 'offline' media ownership and control rules

In Ten's view, the reach rule and all other current media ownership rules including: the 'voices' test and the limits on owning more than one television licence in a market or two radio licences in a market should be removed. All media mergers and acquisitions should instead be determined under existing competition law which is well equipped to take account of rapidly changing market dynamics.

Diversity of major sources of information and perspectives is an enduring concept that is vital to our democracy. However, access to a diverse range of information, sport, entertainment and news and opinion no longer depends on a diversity of terrestrial television, radio and print newspaper operations within a given geographic area. On various internet-enabled devices, consumers can personalise their news, information and entertainment sources from a vast array of local, national and global sources, including primary source user-generated content.

Existing media ownership and control rules in the BSA are highly technology specific and applied asymmetrically which has rendered them outdated and ineffective in assessing the true impacts of media mergers or acquisitions on diversity. The Australian Communications and Media Authority (ACMA) has noted that current media ownership and control mechanisms are 'broken' and do not reflect market realities.¹ In 2012 the Convergence Review recognised that the current rules were limited in their application because they do not apply to a number of influential sources of news and opinion, including online news services.

The two out of three rule is outdated and has been overtaken by technology

The two out of three rule was passed when TV, radio and printed newspapers were the primary media Australians accessed and media companies largely operated through a single distribution platform.

Even in 2006 when the 2 out of 3 rule was introduced the world was a different place: YouTube had only just launched in 2005, Facebook and Twitter launched to the public in 2006. Smartphones and tablets did not exist (the iPhone was released in 2008, iPad was launched in 2010). There were only 3 commercial free-to-air channels, the first commercial multichannels (ONE, 7TWO and Go!) were not launched until 2009. There was no online catch-up television with ABC iView only launching in 2008.

Now all media platforms have converged and media brands must be made available across all platforms and across numerous devices in order to compete.

The media ownership rules in the BSA only apply to associated printed newspapers, and free-to-air television and radio services delivered over Broadcasting Services Band spectrum by licensed operators. These laws do not recognise that the Internet exists.

¹ The Australian Communications and Media Authority, "Broken concepts—A 2013 Update on the Australian communications legislative landscape", June 2013. Available at <http://acma.gov.au/theACMA/About/The-ACMA-story/Connected-regulation/broken-concepts>

While Ten's three terrestrial channels (TEN, ELEVEN, ONE) are covered, free linear programmed channels offered using the designated Broadcasting Services Bands by telecommunications companies like Telstra or Optus are not covered. Similarly, the existing rules do not contemplate linear channels delivered by IPTV or streamed over the Internet.

An 'associated' newspaper that prints an edition at least four times per week such as *The Age* is captured but *theage.com.au* is not covered and neither is *The Age* iPhone/iPad application. Therefore, if Fairfax decided to cease distribution of printed versions of *The Age* or *The Sydney Morning Herald* then it would no longer be covered by the existing ownership rules in those markets. Of course, national newspapers like *The Australian* and *The Australian Financial Review* are not covered because they are not 'associated' to a particular geographical market. Likewise the Sunday editions of the major metropolitan daily newspapers such as *The Sun-Herald* or *The Sunday Telegraph* are not covered by the rules.

Commercial free-to-air FM/AM radio stations transmitted terrestrially over spectrum are covered irrespective of the format of the station. Radio services distributed online such as Spotify or Pandora are not covered.

The rules do not apply to other influential services such as:

- Online news sites such as *smh.com.au*, The Guardian or The Huffington Post
- Online free-to-air TV catch-up such as tenplay, 7Plus and 9Now
- Online TV channels or video platforms such as YouTube
- Online radio and streaming services such as Pandora, Spotify or digital radio stations
- Subscription video on demand (SVOD) services such as Netflix, Stan or Presto
- Online social media platforms such as Facebook or Twitter
- Other online content providers such as Apple or Amazon
- National broadcasters: ABC, SBS
- Pay TV providers (cable/satellite/IPTV) such as Foxtel and Fetch TV
- Telecommunications companies providing broadcasting-like or news content: TelstraTV, OptusTV, Vodafone
- National printed newspapers: *The Australian*, *The Australian Financial Review* and Sunday editions
- Google

[The two out of three rule is threatening diversity and hurting Australian media companies](#)

Australian media companies must be allowed to configure themselves in ways that can better support their viability and allow them to access scale and capital. If they can do this then they are in a stronger position to continue to provide local content. The two out of three rule prevents this. Without numerous profitable local media voices, diversity in local news and information is seriously threatened.

By arbitrarily preventing Australian media companies from becoming truly cross-platform, the rules are now actively hurting our efforts to compete for viewers and for advertising revenue with overseas-based technology companies that are exempt from media regulation, don't pay television

licence fees, pay minimal corporate tax despite taking billions in advertising revenue in this market, and in some cases don't have any local employees.

*"It may be that to compete in the world of media local players need to leverage their content across all media platforms, and if we don't allow them we may be holding them back in competition against international companies."*²

According to the Financial Times Apple is the world's most valuable company with Google at number 4 and Facebook at number 29.³ These powerful companies have balance sheets and market capitalisations that dwarf the combined market capitalisation of the Australian media industry and these are the companies that Ten is now competing directly against for viewers and advertising revenues.

Protecting diversity

The Internet and an explosion in online content services and communications devices such as tablets and smartphones mean that Australians can access more content, including news and information, than ever before in multiple ways. However, without strong and viable Australian media companies, diversity in this market will be threatened by increasing competition from powerful overseas-based

³ FT500 2015 <http://www.ft.com/intl/cms/s/2/1fda5794-169f-11e5-b07f-00144feabdc0.html#axzz43fmdJk2L>

media and technology companies that have no commercial interest in making local content or providing local or regional news services.

The Australian Competition and Consumer Commission (ACCC)

Media mergers and acquisitions that would likely substantially lessen competition in a relevant market are prohibited unless authorised or granted formal clearance by the ACCC (Section 50 of the Competition and Consumer law). In carrying out this oversight role the ACCC is not limited to considering only particular media platforms or services but can look at all relevant players, platforms, and services in a market.

ACCC Chairman Rod Sims has recently confirmed that diversity is a key factor that the ACCC looks closely at in approving proposed mergers or acquisitions.

“Under the Competition laws we look at diversity as much as we look at price. People often think with mergers that we are just making sure two competitors are not making a market less competitive and making prices go up. But don’t overlook the fact that Section 50 can deal with ‘diversity’ as well as with price.”⁴

“There’s not much difference between a substantial lessening of competition and people’s desire for diversity. We look at diversity as part of our economic assessment.”⁵

Several media ownership rules will remain in the BSA

Ten supports the removal of all media ownership rules in the BSA. However, this Bill only removes two. The following rules will remain and continue to constrain media companies that own television, radio and newspaper assets:

- **The Voices Test** – after any merger or acquisition no less than five independently-controlled TV, radio or newspaper ‘voices’ must remain in a metro area, and four in a regional area.
- **One-to-a-market rule:** cannot control more than one commercial TV licence in an area.
- **Two-to-a-market rule:** cannot control more than two commercial radio licences in the one area.

75% Reach Rule

Ten’s position on the repeal of the 75% reach rule has been consistent: pulling one major policy lever without looking at the bigger picture is not good media policy and we remain strongly opposed to the removal of the reach rule in isolation.

Ten does support repeal of the reach rule as proposed in the *Broadcasting Legislation Amendment (Media Reform) Bill 2016*. Both rules are equally outdated and ineffective in protecting diversity and removing both the reach rule and the two out of three rule at the same time ensures that all media companies are freed up to pursue growth at the same time. To remove one rule without the other

⁴ “ACCC addresses fears over News Corp expansion” – Dominic White, *The Australian Financial Review*, 1 February 2016

⁵ “No Longer a Bachelor: Foxtel secures ACCC approval for move on Ten” – Darren Davidson, *The Australian*, 23 October 2015

would provide an unfair commercial advantage to some media companies while leaving others unjustifiably constrained and possibly worse off than under the current regime.

About Ten Network

Ten owns and operates free-to-air broadcasting licences in Australia's five largest metropolitan capitals: Sydney, Melbourne, Brisbane, Adelaide and Perth. In these markets Ten broadcasts a primary channel, TEN (simulcast in high definition and standard definition), as well as channels ELEVEN and ONE. Ten also offers a wide range of freely-available content across numerous platforms including catch-up programming and live streaming through our online catch-up and streaming service, tenplay. Ten employs close to 1,000 staff around the country and indirectly employs many more in the Australian production sector through an outsourced content production model.
