## 1. Introduction

---

In our 2008 study on off-shoring and the Australian services industries, NIEIR posed the question, in the context of the developing mining boom that was seen by most commentators as the source of Australia's future prosperity: "*Without Plan B – a strong services sector – what is Australia's future should China stumble?*" Today the question is no longer **whether** China will stumble but whether the stumble will become a free fall. This report indicates that there has been no apparent progress on Plan B. The 2008 report predicted that the pace of off-shoring was likely to continue to grow as new technology made new forms of remote work possible. In 2012 there is evidence that that is the case. The pace at which jobs have been moved off-shore has been roughly in line with the NIEIR base case (20,000 year) and the proportion of service sector jobs exposed to off-shoring has moved up from 9.7 per cent in 2007 to 10.2 per cent in 2012 (Base Case). NIEIR's concern at the time was not just for the jobs being lost but that a "vicious cycle of off-shoring jobs, losing skills and competencies from the domestic economy and as a result losing more jobs off-shore" could become institutionalised. The consequence for Australia would be that transfers to other countries offset price benefits to Australian customers from lower cost services and that we see increased inequality in incomes and between inner urban and rural regions.

### Key points of this update:

- **Forecasts from the 2008 study are on track to be realised in the absence of policy intervention**
- **More than 80,000 service sector jobs have moved off-shore since previous report**
- **With more than 20,000 jobs moving off-shore each year we would expect between 700,000 and 1 million jobs to move off-shore in the next three decades**
- **Action is needed to address service sector off-shoring crisis and boost competitive position of Australian service industries.**

### 1.1 Terms of trade in selected services

Since NIEIR's 2008 report there has been a marked deterioration in the terms of trade for those services which NIEIR identified as being at risk of off-shoring (Figure 1). Trends identified in 2008 have been compounded by the impact of the mining boom on the rest of Australia's trade exposed industries. As NIEIR has pointed out elsewhere, the benefits of the mining boom have been overstated because of the import of both equipment and labour for the construction phase of new projects, the rise in the Australian dollar and crowding-out impacts (the so-called Dutch disease). The high dollar has undoubtedly influenced the competitiveness of services and this has given fuel to the trends identified in the 2008 report. Figure 2 shows the trend has been driven by both increased imports and reduced exports of services. The picture highlights the failure of policy makers to develop a clear strategy for the services sector to deal with the combined impact of the mining boom and greater transferability of jobs to off-shore locations. Indeed the government appears to have been unwilling so far to respond to union requests to increase transparency in relation to where services are performed so that consumers can exercise choice in purchasing decisions.

**Figure 1: Trade balance of services at risk of off-shoring**

**Figure 2: Imports and exports of services at risk of off-shoring**

## 1.2 Job losses since 2008

This report estimates that the loss of jobs due to off-shoring is running at a rate in excess of 20,000 per year. This rate is approximately the rate required to reach the Base Case scenario of the 2008 report, which estimated jobs 'at risk' of off-shoring at 849,646 over the next two to three decades (29,000 per annum).

The revised estimate for this report is slightly higher at 880,842 service sector jobs (Base Case) reflecting the higher rate of 10.2 per cent of service sector jobs being 'at risk' (Figure 3) compared to 9.7 per cent in 2007. The Low Case scenario in this report is 704,848 and the High Case 1,051,118 jobs over the next two to three decades.

**Figure 3: Service industry jobs at risk of off-shoring over the next two to three decades**

## 1.3 Occupations 'at risk'

Occupations experiencing high rates of off-shoring are in ICT and administrative occupations such as data processing and clerical workers (including bank workers, law clerks, payroll, accounting, data entry). The finance and insurance sector and professional, scientific and technical services sector have high proportions of jobs 'at risk'.

Figure 4 below lists the occupations most 'at risk' of off-shoring. As explained elsewhere in this report and in NIEIR's 2008 report, this list is compiled using a two-stage methodology. The first step applies an industry indicator of off-shoring (based on existing patterns of concentration of service delivery) and the second stage applies an occupation indicator.

Across all service industries, the occupations most at risk of future off-shoring are; clerical workers, accounting staff, software applications and programming and bank workers. The potential for a range of functions to be undertaken remotely with existing or emerging technology is evident in all occupations listed.

The occupations listed in Figure 4 account for 68 per cent of occupations 'at risk' of being off-shored.

**Figure 4: Occupations at risk from off-shoring over the next 20 to 30 years**

Note: In the above chart Specialist Clerks include accounting clerks, purchasing and supply logistics clerks and payroll clerks.

## 1.4 Finance industry jobs high risk

For the finance and insurance sector the proportion of jobs 'at risk' is almost twice the rate for service industries as a whole. Figure 5 shows that 24 per cent of jobs are at risk of off-shoring representing 97,000 jobs (Base Scenario) or more than 3,000 jobs a year over the next two to three decades.

**Figure 5: Finance and insurance industry jobs at risk of off-shoring over the next two to three decades**

The impact of off-shoring is much higher when particular occupational categories are examined (Figure 6). Three quarters of finance and insurance industry occupations are in the top one third of occupations at risk of off-shoring while more than one third of jobs are in the top 10 per cent. Occupations at most immediate risk are call or contact centre workers, bank workers (17 per cent of finance industry jobs) and software and applications programmers.

## 1.5 Professional, scientific and technical services

Another industry sector with a high proportion of jobs 'at risk' is professional, scientific and technical services. In this sector, which includes professional services such as legal, engineering and specialist ICT services, 20 per cent of jobs are 'at risk' of off-shoring. This sector represents almost 20 per cent of all jobs 'at risk' in the service industries. Major occupations impacted are ICT workers (managerial, technical and support roles) and clerical workers (including legal clerks, accounting clerks and keyboard operators). About 170,000 jobs are 'at risk' (Base Case) in this industry sector.

**Figure 7: Professional, scientific and technical services jobs at risk of off-shoring over the next two to three decades**

Table 1 shows occupations with the highest number of jobs at risk in this sector.

<b>Table 1      Employment by selected four digit ASCO occupations 'at risk' from off-shoring over next two decades – based on occupational employment levels 2011 – Professional, Scientific and Technical Services (ANZSIC Division M)</b>				
<b>ANZSCO</b>	<b>Occupation</b>	<b>Base scenario</b>	<b>High scenario</b>	<b>Low scenario</b>
2613	Software and Applications Programmers	19324	24295	14044
3131	ICT Support Technicians	7809	9988	5510
1351	ICT Managers	5692	7065	4244
5311	General Clerks	4315	5254	3366

5511	Accounting Clerks	2608	3248	1957
5619	Other Clerical and Office Support Workers	2076	2434	1708

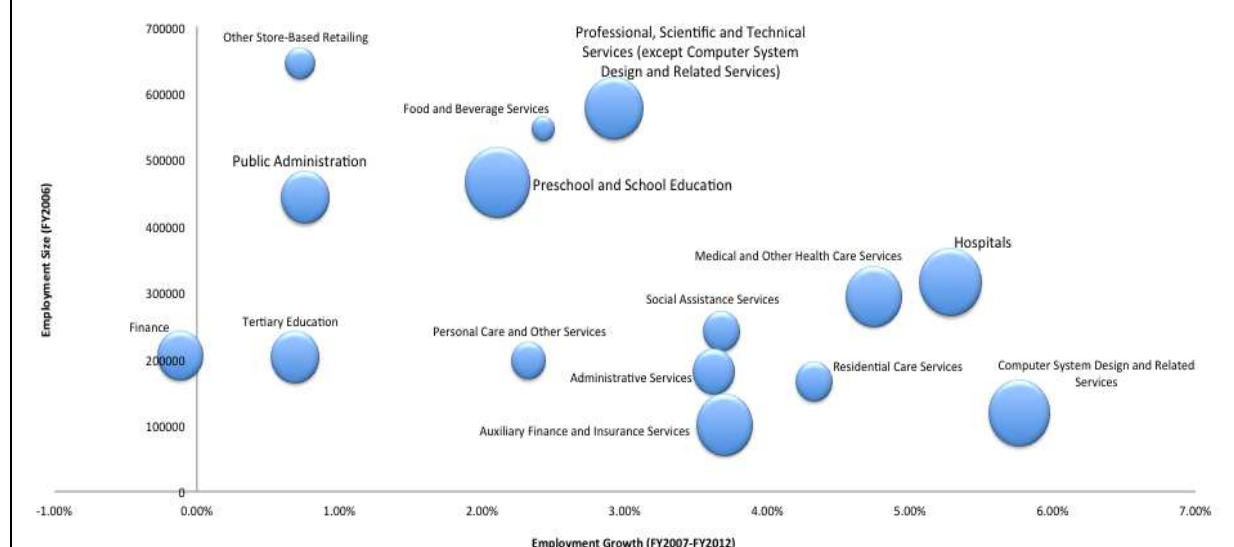

## 1.6 Other sectors

Other sectors with a high proportion of jobs 'at risk' of off-shoring include Information, Media and Telecommunication (20 per cent of total employment in that sector) and Public Administration and Safety (11.7 per cent). In the case of the latter, while it is less likely that government would off-shore services directly, it would be quite possible that out-sourced services could be off-shored. This points to a two-stage process discussed in NIEIR's original report where first the service is out-sourced and then the outsourced service provider substitutes local employment with off-shore employment.

## 1.7 Clever country in retreat?

There is evidence that failure to deal with competitiveness of Australia's services industries is impacting the government's ambition to move toward being a knowledge-based economy and undermining the significant investment being made in education and training services. For example, of 15 industries that are major employers of people holding a Bachelor degree (Figure 8) the most consistent growth in employment is in domestically-focused services that need to be delivered face-to-face (for the time-being at least) such as hospitals, health and other care services. Services related to new technology such as computer systems design are more erratic and, as noted above, will be increasingly prone to off-shoring. The mining industry's uptake of professional services is expected to decline with the slowdown in investment. The finance sector has exhibited negative employment growth over the period from 2007 to 2012 while Tertiary Education and Public Administration have grown at below the rate of population growth. In the Figure 8 the size of the ball represents the relative proportion of people with a Bachelor's degree to the total number of people employed in that industry. The position on the horizontal axis represents employment growth and the position on the vertical axis the size of the workforce. The number of employees with a Bachelors degree is derived from 2006 Census data.

**Figure 8: Australia: Employment, size, growth, Bachelor qualification levels, top 15 industries by employment of Bachelor Degrees (06 Census Data)**

## **1.8 Next steps**

In our last report, NIEIR advocated the need for a comprehensive service sector strategy led by a high level task force reporting directly to relevant Cabinet Ministers. The goal was to support creating a strong place for the Australian workforce in the domestic service sector while creating a place for the Australian sector in the global traded services economy. The window to build a place in the global industry is closing as other players occupy strategic positions. Unlike manufacturing, these players are not from low-wage countries but rather capitalise on the skills and experience of their people. There is a danger facing Australia now that not only will we fail to take a role in the global market but that we will de-skill our workforce by moving key parts of the service sector off-shore. Four years have been lost since this matter was raised in our previous report.

---

## 2. Background to this report

---

In 2008 NIEIR was asked to:

- provide advice on the likely impact of off-shoring based on at least three different scenarios; Base Case, High and Low scenarios;
- provide advice on how the impact of those scenarios will be distributed through the Australian economy and workforce; and
- develop policy options that could be proposed to governments and industry to ensure Australian workers are not disadvantaged by these global trends.

In this update we focus on particular selected services and occupations in the services sector highlighting the three different scenarios again – base case, high and low scenarios.

In the 2008 study NIEIR determined that in the short-term the following seven characteristics identify the types of service jobs more likely than others to be off-shored.

1. Heavy reliance on information technology and routine or rule-based work.
2. Lack of need for personal contact with customers.
3. Wage cost savings in low-wage countries that outweigh productivity losses.
4. Tradability.
5. Availability of skills abroad.
6. Labour intensiveness, ease of physical relocation and separability of jobs tasks from other parts of the production process.
7. Absence of cultural, institutional and legal barriers.

In the longer term, the potential for off-shoring will increase because the speed, capability and coverage of broadband infrastructure will steadily improve and international service centres will continue to develop scale and skills that provide global competitive advantage.

At some point in the future, the virtual office will become a reality. Only services that require face to face contact (nursing, wait staff) will be tied to a particular location. Services industries will be based on a global workforce with firms seeking to maximise efficiency and competitive advantage based on global availability of skills, scale, quality, innovation and cost competitiveness. At this point, employment in many parts of the sector will be premised on globally contestable remuneration and costs.

Nothing has occurred since our 2008 report to change this thesis. In fact, experience since has confirmed these findings.

Our 2008 Study and this update take a rigorous quantitative approach based on the following simple concept: Existing patterns of service delivery (within a country) are an indicator of services and occupations that can be outsourced to foreign countries. If an industry or occupation is not strongly concentrated by region, then it is an indication that proximity to clients and markets is a competitive advantage. If, on the other hand, after adjustment for industry structure, it is found that industries or occupations are concentrated by region then it is an indication that within a national economy these industries and occupations are capable of a high level of inter-regional trade. If services of industries and occupations can be internally traded in an economy, it is a good indication that they could be traded internationally. There has to be adjustments to the results because for some services, even if they are technically capable of being traded, for example a Government service, the reality is that they will not be traded. However, all adjustments made to the outcomes of the application of the methodology in the study are transparent.

---

### 3. Off-shoring: Estimating the impact

---

The objective of NIEIR's 2008 study "*Off-shore and off work: The future of Australian service industries in a global economy – A call to action*" was to estimate the potential for the substitution of domestic employment in the Australian Services Sector with workers located outside Australia or from "off-shore".

Traditionally service oriented occupations, either employed in the service industries directly or as inputs into the goods (agriculture, mining and manufacturing) industries were not easily traded. That is, effective work performance required proximity to the place of employment, whether it is the factory, mine or office. The post 1980s information and communications technology (ICT) increasingly allowed more and more services to be provided remotely from the enterprise's place of location. As the ICT revolution has progressed, the potential for this has increased and over the next decade the potential for off-shoring will again increase significantly once a national high speed broadband network is in place.

#### 3.1 The methodology for the 2008 study

The methodology employed in the 2008 study was based on the recognition that the impact of off-shoring operated at two different levels, namely:

- (i) the replacement of whole business units (firms, establishments, subsidiaries) by imported services by off-shore located business units; and
- (ii) the replacement of parts of business services provided to an on-going business unit either in-house or out-sourced to Australian residents by services provided off-shore.

The core methodology to assess the potential for this for Australian data was based on the following premises. Economic development within nations over the last century has been characterised by the concentration of those industries and occupation where services are tradeable across distance at a relatively small number of locations. These industries and occupations are the same industries and occupations that will be at risk of being off-shored.

The basic methodology was to identify those industries and occupations that were concentrated. This was done by measuring a GINI coefficient across Australian Local Government Areas (LGAs) in order to measure the concentration of industries and occupations. A GINI coefficient of zero means an industry or occupation is perfectly distributed across all LGAs and, therefore, at no risk of being off-shored. A GINI coefficient of 1 means the industry or occupation is concentrated in one LGA and, therefore, at 100 per cent risk of being off-shored.

After a set threshold, which was a GINI coefficient of 0.1, the higher the GINI coefficient the greater the risk, or in the language of the report, the higher the potential for an industry or occupation to be off-shored. The maximum potential for off-shoring was 0.6. That is, an industry or occupation that produced a GINI coefficient of 0.6 or above a 100 per cent potential for off-shoring was assigned to the industry. The potential for off-shoring of an industry or occupation was, therefore, proportional to the value of the industry and occupation GINI coefficient (less 0.1), with a 0 to 0.5 range. That is, after deducting the 0.1 threshold from the minimum and maximum value. This basic case constituted the Base scenario estimates for the potential for off-shored employment.

The High and Low scenario estimates vary the influence of the change in the GINI from the 0.1 threshold. The High scenario multiplies the change by 1.33 and the Low scenario 0.66. The idea here is that for the Low scenario the risks of off-shoring only rise when the GINI coefficient reaches high values and, therefore, industries and occupations with GINI coefficients in the 0.1 to 0.2 range, for example, have relatively little risk of off-shoring. The High scenario takes the opposite approach and assumes the risk of off-shoring increases disproportionately as the GINI coefficient measure of the 0.1 threshold compared to the case where the GINI coefficient is high at 0.3 to 0.4. In effect, the High scenario lowers the GINI coefficient per 100 per cent risk of off-shoring from 0.6 to 0.45.

### **3.2 A two-step estimating procedure**

A two-step estimating procedure is applied to obtain the total estimates for the potential of off-shoring Australian employment. The first was to estimate the industry employment that was at risk using the calculated industry GINI coefficients. The next step was to apply the occupation GINI to the remaining industry employment to estimate the occupation employment that was likely to be out-sourced.

### **3.3 The update**

This study updates the previous study by recalculating the 2006 ANZSIC06 estimates based on the ANZSCO definitions. The 2006 study was based on the old ASCO and ANZSIC93 definitions.

The concordance between the two classifications is given in Appendix A. There are more ANZSCO occupations than ASCO occupations and the reclassification of occupations in more detail is the key reason why the estimates for out-sourced employment potential for 2006 in his update is greater than the previous 2006 estimates. The reason for this is straight forward. If only aggregate data was used then Australia would have little risk of out-sourcing as the GINI coefficient across LGAs would be less than 0.1. The greater the level of disaggregation and the more actual industry definitions compared to like for like (or homogenous) industries and occupations, then the greater is likely to be the potential for out-sourcing. A point will be reached when this effect will not occur because the statistics will describe homogenous industry and occupations. This point was not reached with the old ASCO classifications. The ANZSIC93 classifications, however, were close to describing like for like industries.

The 2006 estimates are updated to 2011 using NIEIR's estimates of ANZSCO and ANZSIC06 employment estimates by LGA and industry. This database is described in NIEIR/ALGA "*State of the Regions – 2012-13*" report.

Table 2 Per cent of service industry occupations from off-shoring over next two to three decades – Occupations and industry methodology – Comparisons

### 3.4 Estimates of out-sourcing since 2006

This update includes an estimate of out-sourcing since 2006 by using Australian import of services statistics published by the Australian Bureau of Statistics (ABS). Table 3 shows the classifications of the service import statistics. Figure 9 shows the growth in the value of service sector imports to Australia.

Table 3 The import service categories where payments for off-shored services are most likely to be made	
Import category	
1.	Computer services
2.	Information and other services
3.	Research and development services
4.	Professional and management consulting services
5.	Technical, trade related and other business services
6.	Audio/visual and related services

To estimate the employment losses the impact to domestic supply ratio for the following industries:

- (i) professional services;
- (ii) administrative services;
- (iii) public administrative services;
- (iv) education and training;
- (v) health;
- (vi) arts and recreation; and
- (vii) other services,

were estimated using that part of imports that was relevant to capturing off-shored service components.

Next, the import to supply rate was adjusted to reflect employment equivalent dollar for dollar expenditures. This involved estimating the cost of savings for employment in Australia vis-a-vis employment overseas. In the 2006 report the employment equivalent cost differential was estimated at 40 per cent. Hence, the import to supply ratio was divided by 0.6.

The increase in the adjusted import to supply ratio from 2006 was calculated next. For a given quarter, the increase in the import to supply ratio translates into a loss of domestic production. The loss of domestic production is then multiplied by the employment to gains output ratio for the quarter for the industry estimated from NIEIR's data base.

The results of the calculation are given in Table 4. The results show that since 2006 the increase in the employment loss from outsourcing over the last two years is running at a rate of in excess of 20,000 per year. This rate is approximately the rate required to reach the base scenario off-shoring employment loss of 880,000 over the next three decades. This rate is 29,000 per annum.

The major assumption of this analysis is that all increases in the import share in total supply for the nominated industries reflect off-shoring payments.

That is, non off-shoring payments for services are captured in the growth in domestic supply multiplied by the 2006 import ratio. This will not be the case for all payments. However, the estimates in Table 4 are likely to under-estimate significantly the off-shoring service payments because of:

- (i) some off-shoring payments would have been included in the 2006 import estimates; and
- (ii) all off-shoring service payments are unlikely to be captured in the ABS statistics, even if the sample used to collect the statistics was reliable.

<b>Table 4 Estimates of employment loss from off-shoring services since 2006 ('000)</b>									
	2009.3	2009.4	2010.1	2010.2	2010.3	2010.4	2011.1	2011.2	2011.3
<b>Employment losses from increase in import penetration – since 2006</b>									
Professional services – \$cvm	11	17	14	13	16	22	22	22	20
Administrative services	3	4	4	4	4	5	5	6	6
Public administrative services – \$cvm	0	0	0	0	0	0	0	0	0
Education and training – \$cvm	13	13	10	11	19	20	18	25	30
Health – \$cvm	5	5	4	4	8	8	7	10	13
Arts and recreation – \$cvm	5	5	5	5	9	8	7	10	13
Other services – \$cvm	2	2	2	2	2	3	2	3	3
<b>Total</b>	<b>38</b>	<b>47</b>	<b>38</b>	<b>39</b>	<b>59</b>	<b>67</b>	<b>62</b>	<b>76</b>	<b>85</b>

Notes: This is only a partial analysis of the full extent of off-shoring. The direct estimates of finance sector losses probably need to be added, or at least a portion of them.  
cvm = chain volume measure.

## Appendix B: Concordance between ANZSCO and ASCO

**Table B.1 Simple concordance between the Australian and New Zealand Standard Classification of Occupation (ANZSCO) and its predecessor the Australian Standard Classification of Occupation (ASCO)**

ANZSCO 2006	ASCO 1996
1111 Chief Executives and Managing Directors	1112 General Managers
1112 General Managers	1112 General Managers
1113 Legislators	1111 Legislators and Government Appointed Officials
1211 Aquaculture Farmers	1314 Aquaculture Farmers
1212 Crop Farmers	1313 Crop Farmers
1213 Livestock Farmers	1312 Livestock Farmers
1214 Mixed Crop and Livestock Farmers	1311 Mixed Crop and Livestock Farmers
1311 Advertising, Public Relations and Sales Managers	1231 Sales and Marketing Managers
1321 Corporate Services Managers	1211 Finance Managers
1322 Finance Managers	1211 Finance Managers
1323 Human Resource Managers	1213 Human Resource Managers
1324 Policy and Planning Managers	1291 Policy and Planning Managers
1325 Research and Development Managers	1299 Other Specialist Managers
1331 Construction Managers	1191 Building and Construction Managers
1332 Engineering Managers	1221 Engineering Managers
1333 Importers, Exporters and Wholesalers	1192 Importers, Exporters and Wholesalers
1334 Manufacturers	1193 Manufacturers
1335 Production Managers	1222 Production Managers
1336 Supply and Distribution Managers	1223 Supply and Distribution Managers
1341 Child Care Centre Managers	1295 Child Care Co-ordinators
1342 Health and Welfare Services Managers	1292 Health Services Managers
1343 School Principals	1293 Education Managers
1344 Other Education Managers	1293 Education Managers
1351 ICT Managers	1224 Information Technology Managers
1391 Commissioned Officers (Management)	1294 Commissioned Officers (Management)
1392 Senior Non-commissioned Defence Force Members	3994 Senior Non-Commissioned Defence Force Officers
1399 Other Specialist Managers	1299 Other Specialist Managers
1411 Cafe and Restaurant Managers	3321 Restaurant and Catering Managers
1412 Caravan Park and Camping Ground Managers	3325 Caravan Park and Camping Ground Managers
1413 Hotel and Motel Managers	3323 Hotel and Motel Managers
1414 Licensed Club Managers	3324 Club Managers (Licensed Premises)
1419 Other Accommodation and Hospitality Managers	3329 Other Hospitality and Accommodation Managers
1421 Retail Managers	3311 Shop Managers
1491 Amusement, Fitness and Sports Centre Managers	3391 Sport and Recreation Managers
1492 Call or Contact Centre and Customer Service Managers	
1493 Conference and Event Organisers	3392 Customer Service Managers
1494 Transport Services Managers	3292 Project and Program Administrators
	3393 Transport Company Managers
1499 Other Hospitality, Retail and Service Managers	3211 Branch Accountants and Managers (Financial Institution)
2111 Actors, Dancers and Other Entertainers	2538 Actors, Dancers and Related Professionals
2112 Music Professionals	2537 Musicians and Related Professionals

**Table B.1 Simple concordance between the Australian and New Zealand Standard Classification of Occupation (ANZSCO) and its predecessor the Australian Standard Classification of Occupation (ASCO) – continued**

ANZSCO 2006	ASCO 1996
2113 Photographers	2532 Photographers
2114 Visual Arts and Crafts Professionals	2531 Visual Arts and Crafts Professionals
2121 Artistic Directors, and Media Producers and Presenters	1296 Media Producers and Artistic Directors
2122 Authors, and Book and Script Editors	2535 Authors and Related Professionals
2123 Film, Television, Radio and Stage Directors	2536 Film, Television, Radio and Stage Directors
2124 Journalists and Other Writers	2534 Journalists and Related Professionals
2211 Accountants	2211 Accountants
2212 Auditors, Company Secretaries and Corporate Treasurers	1212 Company Secretaries
2221 Financial Brokers	3212 Financial Dealers and Brokers
2222 Financial Dealers	3212 Financial Dealers and Brokers
2223 Financial Investment Advisers and Managers	3213 Financial Investment Advisers
2231 Human Resource Professionals	2291 Human Resource Professionals
2232 ICT Trainers	2491 Extra-Systemic Teachers
2233 Training and Development Professionals	2291 Human Resource Professionals
2241 Actuaries, Mathematicians and Statisticians	2293 Mathematicians, Statisticians and Actuaries
2242 Archivists, Curators and Records Managers	2299 Other Business and Information Professionals
2243 Economists	2522 Economists
2244 Intelligence and Policy Analysts	2299 Other Business and Information Professionals
2245 Land Economists and Valuers	2295 Property Professionals
2246 Librarians	2292 Librarians
2247 Management and Organisation Analysts	2294 Business and Organisation Analysts
2249 Other Information and Organisation Professionals	2549 Other Professionals
2251 Advertising and Marketing Professionals	2221 Marketing and Advertising Professionals
2252 ICT Sales Professionals	2222 Technical Sales Representatives
2253 Public Relations Professionals	2221 Marketing and Advertising Professionals
2254 Technical Sales Representatives	2222 Technical Sales Representatives
2311 Air Transport Professionals	2541 Air Transport Professionals
2312 Marine Transport Professionals	2542 Sea Transport Professionals
2321 Architects and Landscape Architects	2121 Architects and Landscape Architects
2322 Surveyors and Spatial Scientists	2123 Cartographers and Surveyors
2323 Fashion, Industrial and Jewellery Designers	2533 Designers and Illustrators
2324 Graphic and Web Designers, and Illustrators	2533 Designers and Illustrators
2325 Interior Designers	2533 Designers and Illustrators
2326 Urban and Regional Planners	2523 Urban and Regional Planners
2331 Chemical and Materials Engineers	2129 Other Building and Engineering Professionals
2332 Civil Engineering Professionals	2122 Quantity Surveyors
2333 Electrical Engineers	2125 Electrical and Electronics Engineers
2334 Electronics Engineers	2125 Electrical and Electronics Engineers
2335 Industrial, Mechanical and Production Engineers	2126 Mechanical, Production and Plant Engineers
2336 Mining Engineers	2127 Mining and Materials Engineers
2339 Other Engineering Professionals	2128 Engineering Technologists
2341 Agricultural and Forestry Scientists	2114 Environmental and Agricultural Science Professionals
2342 Chemists, and Food and Wine Scientists	2111 Chemists
2343 Environmental Scientists	2114 Environmental and Agricultural Science Professionals
2344 Geologists and Geophysicists	2112 Geologists and Geophysicists
2345 Life Scientists	2113 Life Scientists
2346 Medical Laboratory Scientists	2115 Medical Scientists

**Table B.1 Simple concordance between the Australian and New Zealand Standard Classification of Occupation (ANZSCO) and its predecessor the Australian Standard Classification of Occupation (ASCO) – continued**

<b>ANZSCO 2006</b>	<b>ASCO 1996</b>
2347 Veterinarians	2392 Veterinarians
2349 Other Natural and Physical Science Professionals	2119 Other Natural and Physical Science Professionals
2411 Early Childhood (Pre-primary School) Teachers	2411 Pre-Primary School Teachers
2412 Primary School Teachers	2412 Primary School Teachers
2413 Middle School Teachers (Aus) / Intermediate School Teachers (NZ)	2412 Primary School Teachers
2414 Secondary School Teachers	2413 Secondary School Teachers
2415 Special Education Teachers	2414 Special Education Teachers
2421 University Lecturers and Tutors	2421 University Lecturers and Tutors

## Appendix C: The ABS on services classifications

---

ABS 5368055004, imports of services by state and detailed services category, is a major part of the balance of trade statistics. Unfortunately the relevant sources and methods document has been withdrawn for rewriting. However, it would appear that:

- transport imports are sourced from the airlines and shipping lines and from port and customs data;
- travel data derives from arrival and departure forms and surveys of incoming Australian passengers (for expenditures of Australians abroad);
- insurance and finance is constructed as part of the general coverage of these industries by the ABS and RBA; and
- the other items are survey based.

The International Trade in Services Survey was inaugurated in 1988. The methodology would appear to be a major survey from time to time with small surveys of major contributors to update the estimates. The scope of the survey is enterprises which engage in international service trade or receive or pay royalties, excluding transport, travel, insurance, financial services and government services. The initial survey base was developed from the foreign investment survey, business directories and the financial press. The survey base and other parts of the methodology were revised in the early 1990s. There have been further revisions and the sample now includes major firms operating in the area plus smaller businesses believed to be active, though here the sample frame may not have complete coverage. The ABS is working towards achieving such coverage.

The relative standard errors are fairly low (say 1-2 per cent) for large items, but can become large for small items and for net items. Non-sample or respondent error can also occur. A subjective assessment made in 1996 was that the published estimates of services flows are likely to be within 10 per cent of the true value. The current view is that data quality has improved since then.

The categories used in ABS 5368055004 are closely related to those recommended in the IMF document BPM6. The Manual on Statistics of International Trade in Services is also relevant.

According to BPM6, 'outsourcing' occurs when functions formerly carried out in-house are contracted to a specialist service provider. Such services are not distinguished from services which have never been carried out in-house, and are classified according to type of service provided. Thus a call centre selling products is a trade-related service while a call centre providing computing support is a computer service.

In the following notes on the classification, only the most detailed headings are listed.

### **Manufacturing services on physical inputs owned by others**

Covers assembly, packing and other processes on goods owned by others, including such services as liquefaction of natural gas and refining of oil where not owned by the refiner. The data source is mainly customs, the same as that used for goods. Australia does not import much under this heading.

## **Maintenance and repair services NEI**

This comprises the value of work done overseas on Australian-owned equipment. It is a rather small category for Australia, probably because of the transport costs of sending equipment other than aircraft overseas for repair.

## **Passenger transport**

Imports are defined as the costs of carrying residents by non-resident carriers and comprise principally fares paid to overseas transport providers, including commissions and taxes. Fares paid to cruise liners are excluded, being defined as travel.

## **Freight**

Values of goods exported are calculated FOB; freights paid by the exporter are included as an import of freight services. Data comes from returns of physical trade and there are many rules to ensure consistent treatment.

## **Other transport**

Comprise fees and charges incurred in transport but not on freight waybills or included in fares. Not of great importance.

## **Postal and courier services**

Covers payments to overseas post offices, DHL and the like.

## **Business travel**

Overseas expenditures (excl fares) on trips for which the main purpose is business as estimated from surveys of returning Australians. Items purchased overseas and brought back to Australia are included.

## **Personal travel, education**

Overseas expenditures (excl fares) on trips for personal education as estimated from surveys of returning Australians, defined as people who have not changed their place of residence while overseas.

## **Personal travel, other**

Overseas expenditures (excl fares) on non-business non-educational travel as estimated from surveys of returning Australians. There is considerable discussion of the treatment of time-share arrangements but these are probably of marginal importance.

## **Other travel**

This is a fairly substantial item and BPM6 does not give much guidance as to what it is.

## **Construction**

This is defined as construction within Australia by non-resident construction enterprises. However the item is negligible. It would seem that there are no such enterprises.

## **Direct insurance**

This item covers insurance premiums paid overseas on the same definition as those paid domestically. BPM6 recommends that freight insurance be covered separately but it isn't so presumably occurs here. The valuation methods mirror those used for domestic valuation.

## **Reinsurance**

This item can only be reported by insurance companies.

## **Auxiliary insurance services**

Covers charges for commissions, brokerage, actuarial assessment and related consultancy and monitoring.

## **Pension services**

Covers payments into overseas pension schemes where these can be distinguished from life insurance.

## **Standardised guarantee services**

Whatever these are, they are negligible.

## **Financial services**

These are payments for services to overseas banks, other financial institutions, brokers and financial advisers. They include payments of direct charges to these bodies, asset management costs taken out of income and asset management costs financed by margins, including the overseas-provided component of Financial Intermediation Service Charges Indirectly Measured – as in the domestic national accounts. These amounts presumably come out of the same source as the measurement of financial value added for GDP.

## **Licences to reproduce and/or distribute computer services**

There appears to be a fine distinction between this subhead and computer services, below. The difference is that this is a payment which allows reproduction and/or distribution.

## **Licences to reproduce and/or distribute audiovisual and related services**

Same problem as the item above, save that the ABS seem to have solved it by identifying no such transactions.

## **Outcomes of research and development**

This would include formal patent charges for the use of intellectual property.

## **Franchise and trademarks licensing fees**

Once again, formal fees for the use of intellectual property.

## **Other charges for the use of intellectual property**

Fees for the use of intellectual property other than the above.

## **Telecommunications services**

Payments to overseas providers of broadcast or transmission services, not including payments for content transmitted.

## **Computer services**

Concentrates on payments for software (purchase or licence) but also includes maintenance and repair of computers, data recovery, programming, website hosting and data processing.

## **Information services**

Not a large item in Australia. Includes newsagency services, subscriptions but not by individuals, and downloads but not of software.

## **Other computer and information services**

This is a bit vague, but thankfully not large.

## **Research and development services**

R&D contracted out overseas – not a large item.

## **Legal, accounting, management consulting, public relations and other professional services**

Though some imports under this heading are arm's length, it can be used to record inputs from related overseas businesses.

## **Advertising, market research and public opinion polling**

Presumably means what it says.

## **Architectural, engineering, scientific and other technical services**

BPM6 does not expand on this one, which presumably means what it says. It is significant and has been expanding rapidly.

## **Waste treatment and de-pollution, agricultural and mining services**

Includes environmental services (including carbon offsets NEI) and also such items as veterinary services and technical services to mining.

## **Operational leasing services**

Essentially equipment rental where the lessee is not responsible for breakdown repairs and the like. Typical items are aircraft and physical computers (not software, which is covered above).

## **Trade-related commission services**

Commissions to brokers, merchants and the like where the broker does not own the item sold. Financial intermediary and transport charges are excluded, being covered elsewhere.

## **Other business services NEI**

Although this item grew very rapidly in the year or two to 2008 it is not enormous. This meant as a residual category to cover payments for such items as personnel recruitment, security services, translation, photography, publishing, building cleaning and real estate services. There is a danger that it will also be used to cover 'outsourcing' narrowly defined, where a business employs an overseas contractor who in turn subcontracts actual professional, accounting, marketing, back-office and other services. However, the intention is that these services be identified and allocated to the appropriate category in the above list and not included here.

## **Audiovisual and related services**

Chiefly personal downloads of audiovisual material.

## **Other personal, cultural and recreational services**

Includes health and education services which do not involve travel to the providing country and such items as fees and prizes for athletes. Also includes the service charge element of overseas gambling – the losses element is covered as a transfer rather than an import.

## **Government goods and services NIE**

Service transactions by governments are allocated as far as possible to the headings above. This category is reserved for transactions which only government undertake, such as those associated with diplomacy, policing and the military. However, some other government items which are hard to classify may find their way here.
