14th October 2015

Dear Sir/Madam,

Re: Social Services Legislation Amendment (No Jab, No Pay) Bill 2015

I oppose the proposed “No jab no play” legislation on a number of grounds and will never subject myself or my children to vaccinations. This ruling of coercion is illegal and immoral.

I am an educated woman and mother whom has thoroughly investigated all sides of the vaccination debate, and I have decided that these medical interventions are unsafe. That is my decision for my children. This decision for my children, and myself, is mine to make. It is not the right of the government or kindergarten or childcare directors or employers to make this decision for my family.

I ask you to please, thoroughly investigate all sides of this issue before introducing legislation that is only going to further segregate members of our society, and worse, further harm children and families.

I have listed below some of the issues that I feel are important for you to investigate when considering this legislation.

Two primary principles which are affected by this legislation:

1. SAFETY
2. FREEDOM

1. SAFETY

The safety of the vaccination schedule has never been studied. The science on vaccines is far from settled. Close study of government graphs in the USA, UK and Australia show clearly that vaccines have not even slowed the progression of any disease often masking symptoms creating unwitting carriers from the recently vaccinated.

Looking at the ingredients list you will see listed a number of known toxins - aluminium, formaldehyde, thimerosal, diseased animal and fetal cell lines etc.

If you were to give these to a tiny baby to drink you would be charged with child abuse, but we are told that injecting them into the bloodstream is safe? Where are the studies on this? Forgetting scientific studies, this defies all common sense.

Where are the long term studies conducted by the Australian government comparing the health of completely non vaccinated children (not chemical laden placebos) vs completely vaccinated children? Such a study should be run for at least ten years before any findings can be relied upon.

Some further safety considerations:

Vaccine court: Since it was established by Ronald Reagan in 1986 the US vaccine court has paid out over \$2.7 billion to over 2600 families.

83 of these payouts were to children with autism. This is a tiny fraction of the children affected.

The CDC has recently been found to have covered up research done in 2004 which indicated that black boys were over 3 times as likely to develop autism after the MMR as other children. The CDC whistleblower is Dr William Thompson. His statement about the cover up was made on 27 August 2014.

Mainstream media has not covered this despite the permanent harm done to thousands of children since. John O'Leary, Ph.D. in molecular biology found measles virus in the gut of 96% of autistic children compared to 6.6% of normal children. Dr O'Leary reports that the virus did not come from natural sources it came from the MMR vaccine. He also stated finding the measles virus in 75% of children with Crohn's Disease.

All vaccines carry inherent risk. Your own websites list vaccine ingredients and associated risks. There are studies proving the harm that many of the vaccine ingredients cause however, when added to vaccines you tell us that suddenly these ingredients are not harmful.

The risks of the vaccines are worse than the risk of the diseases. VAERS is the Vaccine Adverse Effects Reporting System cosponsored by the CDC and FDA. You can download files of reports from different years. A medical background may be helpful in interpreting the data.

<http://vaers.hhs.gov/index> Also check out *The National Vaccine Injury Compensation* at
<http://www.hrsa.gov/vaccinecompensation/index.html>

Vaccines contain numerous toxic ingredients. The preservatives in vaccines are worse than the virus itself. Thimerosal (mercury), aluminium, formaldehyde, and carcinogens are not things I want injected in me or my children.

For those who say mercury is not in vaccines you can see it listed as an ingredient on your website

Vaccinating pregnant women is causing miscarriage, stillbirth, and birth defects. Pregnant women given flu shots resulted in a 4,250% increase in fetal deaths.

<http://vactruth.com/2012/11/23/flu-shot-spikes-fetal-death/#sthash.eg67UXq2.dpuf>

Vaccines can cause SIDS. Sadly it is common to hear of babies dying shortly after being vaccinated, and the ruling being given as SIDS. This article is written by a doctor who opposes vaccines

<http://kellybroganmd.com/article/driving-epidemic-sudden-infant-death-sids/>

Here is another article I recommend

<http://www.thelibertybeacon.com/2013/01/22/sids-and-vaccines-is-there-a-connection/>

Death is a risk of vaccines. Risk of SIDS is listed by vaccine manufacturers. This link is from the FDA. You can scroll down to page 11 where you will see SIDS listed as a risk of Tripedia which is a vaccine for DTaP (diphtheria, Tetanus, and pertussis which is whooping cough).

<http://www.fda.gov/downloads/BiologicsBloodVaccines/Vaccines/ApprovedProducts/ucm101580.pdf>

Also notice autism is listed as a side effect on the next line which brings me to my next point.

Vaccines are linked to autism. They tell you it isn't yet it's listed as a side effect in the medical literature. Go to this link

<http://www.fda.gov/downloads/BiologicsBloodVaccines/Vaccines/ApprovedProducts/ucm101580.pdf>

to read autism listed in a package insert from the manufacturer. America and Australia may deny it, but other countries don't. The MMR vaccine is well known for a higher rate of adverse effects than other vaccines. Many of us have heard of the court in Italy that confirmed a child's autism was caused by the MMR vaccine, but that story got so much attention articles came out about it not being true. There are many parents and some doctors saying the same thing.

Here is a list of 91 studies linking vaccines to autism.

www.scribd.com/doc/220807175/86-Research-Papers-Supporting-the-Vaccine-Autism-Link

Here is an article linking to 22 studies showing a link between vaccines and autism

<http://www.activistpost.com/2013/09/22-medical-studies-that-show-vaccines.html?m=1>

Vaccines can cause infertility, especially Gardasil. The following article lists additional links at the bottom
<http://vactruth.com/2013/07/20/vaccines-can-cause-infertility/>

Vaccines and cancer. Some of the ingredients in vaccines are carcinogenic. I'm not going to get into conspiracy theories or whether some manufacturers intentionally put people at risk for cancer. For me this is simple. Vaccine ingredients are listed in reputable places such as the CDC, FDA, and manufacturer websites. In those lists I see some chemicals that are known to or suspected to be carcinogenic. Vaccines are on the rise. Cancer is on the rise. There are many things associated with an increased cancer risk. Could vaccines be one of them? I think so. Are vaccines solely responsible? Definitely not.

2. FREEDOM

Apart from any safety issue this is an issue of FREEDOM. Freedom which Australians have fought and died for over generations.

"It is unethical, immoral, and contrary to the Nuremberg Protocols to force vaccination without consent. Vaccination is a medical treatment with risks including death. It is totally contrary to all ethics in medicine to mandate that risk to others."

Dr Gabriel Cousens

Universal Declaration of Bioethics and Human Rights

19 October 2005

Article 6 – Consent

1. Any preventive, diagnostic and therapeutic medical intervention is only to be carried out with the prior, free and informed consent of the person concerned, based on adequate information. The consent should, where appropriate, be express and may be withdrawn by the person concerned at any time and for any reason without disadvantage or prejudice.

Article 11 – Non-discrimination and non-stigmatization

No individual or group should be discriminated against or stigmatized on any grounds, in violation of human dignity, human rights and fundamental freedoms.

http://portal.unesco.org/en/ev.php-URL_ID=31058&URL_DO=DO_TOPIC&URL_SECTION=201.html

More facts which have impacted my decision not to vaccinate:

Aborted babies. To make vaccines they take samples of the virus, but they have to have a host of cells (a cell culture) for it to grow on. Cells can be taken from different things. They can use human or animal cells.

They are taken from human foetuses which are babies that have been aborted or from the embryos of monkeys, chickens, and rabbits. If you read the ingredients list aborted babies are listed as human diploid cells.

There is often a denial of adverse reactions being caused by the vaccines. There are countless stories of a clear side effect occurring and doctors denying it. That makes me not trust the product. All medications have risks, and refusing to acknowledge this is unethical.

You can't sue the companies or the doctors. To me that is suspicious.

Vaccination does not equal immunization. If you really felt that your vaccines were effective, the fact that I am not vaccinated should not scare you.

No proof of effectiveness. There are no studies proving how many lives they have saved. You present statistics from third world countries. We live in Australia so please use statistics from ours or similar countries.

Epidemics naturally have a rise and fall. I'd like to see legitimate statistics on the fall of an epidemic after vaccines were given.

Vaccinated people are getting the diseases anyway. What is the point in getting a vaccine that comes with serious health risks if most of the people getting sick with "vaccine preventable" diseases were vaccinated? To say that they are presenting the disease with less symptoms than if they were not vaccinated is completely unscientific and not provable.

Also worth mentioning is the fact that some vaccines shed. This can cause infections to spread in people that would have never been exposed to the virus if it weren't for the vaccine. This also makes the proposed legislation completely ineffective.

Vaccine-induced herd immunity is a theory. The theory has been disproven many times yet pro-vaxers still play that card all the time.

<http://www.thehealthyhomeeconomist.com/the-herd-immunity-myth-and-how-it-pits-parent-against-parent/>

There are other ways to boost your immune system and prevent illness. Hygiene, hand washing, clean water, healthy food, improved living quarters, and the availability of medical treatment have all dramatically reduced disease. You cannot compare unvaccinated people today to unvaccinated people 200 years ago. The circumstances were far too different when you had people dying of things that are now

easily treatable in Australia. If you're really concerned about disease outbreak why not implement health policy or initiatives which focus on these proven methods.

We don't know how vaccines affect the human microbiome. In fact we don't know a lot about the human immune system and yet we are interfering with it with vaccinations.

There are no studies on giving multiple vaccines in one day. It is very common practice for children to get several shots at once, despite the fact this has NEVER been studied or evaluated for safety. There are many stories of babies dying after receiving large amounts of shots at a time.

Children are now getting vaccinated more than any other generation and they are suffering from more diseases than the previous generations. Is it really making us healthier to have over 35 injections of toxins in early childhood? This is the recommended vaccine schedule for birth to 6 years, and there are more vaccines currently being investigated and potentially (and most likely if your legislation is introduced) added to the schedule.

Children need some illnesses to build their immune systems. I know people that vaccinate according to schedule, vaccinate on a delayed schedule, selectively vaccinate, and oppose all vaccinations. I don't think it's a coincidence the vaccinated kids are sicker than the unvaccinated. Their immune systems have been poisoned.

Other countries are opposing or withdrawing support for what our country is promoting because of such a large number of adverse effects. Doesn't that tell you something? Follow the money trail.

There are nurses, doctors, and scientists speaking out against vaccines in general or specific vaccines. If the people who work in the health care field, who have given vaccines and seen the reactions themselves, are opposed to it for their own families, that should be a warning sign. Here are some of the doctors that are licensed and practicing who publicly oppose vaccines.

- Dr Mayer Eisenstein at <http://www.homefirst.com/>
- Dr Russell Blaylock who is a neurosurgeon <http://www.russellblaylockmd.com/>
- Dr Sherri Tenpenny who is an osteopath <http://drtenpenny.com/> also view an interview with her here <https://www.youtube.com/watch?v=GO2xn9Svp6g>
- Dr Meryl Nass <https://www.youtube.com/watch?v=oimq1YrDi3w>
- Dr Joseph Mercola <http://www.mercola.com/>
- Dr Kelly Brogan <http://kellybroganmd.com/>
- Dr Susan Humphries who produced the movie The Greater Good. <http://drsuzanne.net/dr-suzanne-humphries-vaccines-vaccination/>

On her movie's website she listed SOME of the doctors who are publicly against vaccines.

<http://www.greatergoodmovie.org/news-views/doctors-and-scientists-with-concerns-about-vaccines/>

I do not blindly trust anyone. I take information and think for myself. I am thankful for doctors and teachers, but I will look at any information critically before I claim it as my own belief. If you try to force your vaccine agenda on me, I will refuse it. You cannot pressure me to do what you want me to do. I think for myself. This is my decision to make.

I don't trust the marketing of pharmaceutical companies that profit so much off the administering of medication. Though it is an expensive business to be in it is still a multi-billion dollar industry

<http://www.fiercevaccines.com/special-reports/top-5-vaccine-companies-revenue-2012>

Medicine is trial and error. We have made many, many great and wonderful advancements in the last 200 years, but we have also made mistakes. It's understandable. Humans aren't perfect. The problem comes when you are doing something and you realize it is not good for the patients and you don't stop. That's the problem.

When the medical community puts profit over patients, insurance policies over best care, and sticks with what they've been doing because changing may admit you did something that wasn't really best after all, is when medical care becomes bad.

The medical community once said you could drink mercury, smoking was good for your health, pregnant women should be given routine pelvic x-rays and thalidomide, Roundup is completely safe, cholesterol causes heart attacks and coronary disease. In all these cases it was stated the "science is proven" however we now know otherwise.

Please don't make the same mistake with vaccinations.

Yours Sincerely,
