

PARLIAMENTARY INQUIRY QUESTION ON NOTICE

Department of Health and Aged Care

Senate Community Affairs References Committee

Inquiry into Excess Mortality

13 June 2024

PDR Number:

Spike proteins in the COVID vaccines

Written

Senator: Malcolm Roberts

Question:

5. Do you still maintain the spike proteins in the COVID “vaccines” remain in the arm or do you now admit those travel through the body?

Answer:

5. Vaccine mRNA is injected intramuscularly (IM) in the arm and the translated spike protein is mainly localised at the injection site/local lymph nodes, and distributed in liver or spleen in laboratory animals when administered IM. Nonclinical toxicity studies undertaken in laboratory animals were conducted at very high vaccine doses, and human data demonstrated the safety of the approved mRNA vaccines.

PARLIAMENTARY INQUIRY QUESTION ON NOTICE

Department of Health and Aged Care

Senate Community Affairs References Committee

Inquiry into Excess Mortality

13 June 2024

PDR Number:

Spike proteins in reproduction system, liver, heart and brain

Written

Senator: Malcolm Roberts

Question:

6. Do you admit injected spike proteins are found in highest quantities in the reproduction system, liver, heart and brain (specify for each)?

Answer:

6. We are unable to identify the source of the claim provided in the question.

Spike protein is not injected. Vaccine mRNA is injected intramuscularly (IM) and the translated spike protein was mainly localised at the injection site/local lymph nodes (highest quantity) and distributed to the liver or spleen (lowest quantity) in nonclinical studies using animals.
