The Dutch Association of Hospitals 2017 Report

Sense4Baby[®] Maternal-Fetal System Spotlighted

The **Advanced Maternity Innovations** is very pleased to report that in their 2017 Report released in September, our Sense4Baby[®] System was featured by the **Dutch Association of Hospitals in the Netherlands**, the number one rated healthcare system in Europe. They present the case that the use of our Sense4Baby[®] System should be expanded to all Dutch hospital systems.

Brief summary as it relates to Sense4Baby[®] system (Translated from Dutch):

In their recent 2017 Report, The Dutch Association of Hospitals (NVZ) officially reported that Remote Home Monitoring is the future and millions (of Lives and Euros) can be saved by this advancement in patient care. Sense4Baby[®] was selected and evaluated on quality of care, improving the health of patients and lowering the cost. Based on their evaluation, the report presents the case for the widened use of Sense4Baby[®] to be introduced in all hospitals in the Netherlands. Their evaluation was conducted over an extended period of time starting in 2015 and was done independently without the knowledge or support of AMI making it completely independent. The evaluation was based on women with high risk of pregnancy complications which are the patients that require the most exacting care.

The Netherlands ranked number one in 2014, 2015 and 2016 in the annual Euro health consumer index, which compares European healthcare systems. The report ranked 35 to 37 European countries as measured by 48 indicators.

In 2017, Sense4Baby[®] completed approximately 5,000 diagnostic examinations for expectant mothers in the Netherlands. Globally, approximately 10,000 diagnostic examinations have been performed by Sense4Baby[®].

This reports a major accomplishment and international recognition of the power and potential of the Sense4Baby[®] System. As we integrate our electromyography technology and roll out our pipeline of instrumentation, technology, applications and new advances, we believe that we will continue to be recognized and will be rewarded for our market innovation.

Sense4Baby[®] is a prescription device that works with your normal standard of care. As such, it will require your clinician's approval and participation before it can be used to help monitor your pregnancy.

Advanced Maternity Innovations[®] is a Texas-based Life Sciences company which develops medical devices. AMI is focused on improving women's healthcare – with a particular focus on assisting clinicians with pregnancy evaluation and management through the development of new monitoring technologies.
