Submission to the Inquiry into Nuclear Waste Dumping at Muckaty Station:

Disposal of nuclear waste should not be an issue. Nuclear science has not solved the problem of waste creation. Until it does, nuclear technology should not be used. It is dangerous in a way no other technology is. It can cause global catastrophe on a vast scale. The effects on living beings of the inevitable "accidents" will last for thousands of years.

The people of Muckaty do not deserve this horror; even those misguided people who, for reasons of need, have agreed to allow the dumping in their region. Governments stand eternally damned for this kind of political trickery imposed on the innocent.
