

I am very concerned about the impact of climate change and global warming on our local area based on climate trends.

We experienced already more extreme weather events, winds, storms, heat waves, flooding.

Some of my garden plants simply burnt and killed in one day with over 40°C, the fruit drops off my fruit trees long before it is ripe. Fruit flies found the trees weaker and were able to multiply despite my fruit fly baiting and traps.

The wet weather last year caused root rot of other fruit trees.
