

It is essential that the Senate Committee pay due respects to the Traditional Owners by travelling to Tennant Creek to take evidence from them directly.

The nomination of the Muckaty site by the Northern Land Council was highly controversial and is strongly contested by many Traditional Owners. Resources Minister Martin Ferguson claims that Ngapa Traditional Owners support the nomination of the Muckaty site but he knows that many Ngapa Traditional Owners oppose the dump — as well as numerous requests for meetings, he received a letter opposing the dump in May 2009 signed by 25 Ngapa Traditional Owners and 32 Traditional Owners from other Muckaty groups.

Dear Mr Ferguson,

As a concerned Australian citizen I am opposed to the exclusion of Muckaty station in the new National Radioactive Waste Management Bill (NRWMB). I am very much opposed to a radioactive waste dump on any indigenous land in Australia and I wonder if you would be prepared to have it in your backyard? Please think of future generations of Australians when making all your decisions and don't cave in to big business to make short-term disastrous decisions - remember you are our employee and you must represent Australian peoples interests! Please note the following points in my submission:

This bill is highly coercive

Section 11 of the bill explicitly overrides any state or territory laws that would hinder site selection.

Section 12 then eliminates Aboriginal interests (the Aboriginal and Torres Strait Islander Heritage Protection Act 1984) and environmental interests (the Environment Protection and Biodiversity Conservation Act 1999) from the process of choosing a site.

Section 13 eliminates the property rights of any individual unlucky enough to be in the path of the dump or its access corridors.

Once a site is chosen, it will be assessed under commonwealth environmental legislation which has almost no mechanisms for preventing the project from going ahead.

All discretion in the hands of the Minister

The Bill places enormous power in the hands of the Minister to assess whether or not the Muckaty site should go ahead. No information is given to how this assessment will be carried out, and the bill makes it clear that local people have no right of appeal.

The case for a remote dump has never been made

Nuclear waste should be moved as little as possible, and should be stored above ground close to the point of production, close to centres of nuclear expertise and infrastructure. The Lucas Heights nuclear agency ANSTO is by far the biggest single source of the waste, and all the relevant organisations have acknowledged that ongoing waste storage at Lucas Heights is a viable option — the Australian Nuclear Science and Technology Organisation, the Australian Radiation Protection and Nuclear Safety Agency, the Australian Nuclear Association and even Mr Ferguson's own department. Additionally, requiring ANSTO to store its own waste is the best — and perhaps the only — way of focussing the Organisation's collective mind on the importance of waste minimisation principles. Any site selection process ought to be based on scientific and environmental siting criteria, as well as on the principle of voluntarism. In 2005, the Howard government chose the NT, and ruled out NSW, for purely political reasons. When the federal Bureau of Resource Sciences conducted a national

repository site selection study in the 1990s, informed by scientific, environmental and social criteria, the Muckaty area did not even make the short-list as a “suitable” site.

Yours sincerely,

Benedict Coyne
