

To the

NATIVE VEGETATION LAWS, GREENHOUSE GAS ABATEMENT AND CLIMATE CHANGES MEASURES

My Submission.

I have had my free hold property since about 1983 and I am very worried about what I am able to do on my property as I look after my place and I alternate good farm management on my land. I am in the process of purchasing another small property next to mine and again the way the laws are popping up all the time it is making it hard to survive. I thought that freehold is just that freehold and not opened to backlashes as we pay for this holding.

With the increase of high land valuation rates and insurances also with low productivity and high expenses this is wrong as we pay for the land to live and work it for food for this country and with good farm management , such as stopping soil erosion , weeds and feral animals we look after our land.

Wayne Withers.
