

Senator Ghosh

Is there a distinction that Google makes between information that it provides publicly, for instance in the Tech Report, and information it provides to users of the model that is perhaps not publicly available?

At Google, we provide transparency in relation to the development of our models through releasing information like the [Tech Report](#), which details the technical capabilities of Gemini models. These models were trained jointly across image, audio, video, and text data for the purpose of building a model with both strong generalist capabilities across modalities alongside cutting-edge understanding and reasoning performance in each respective domain.

This Report also discusses our approach toward post-training and deploying Gemini models responsibly to users through services including Gemini, Gemini Advanced, Google AI Studio, and Cloud Vertex AI. In respect of the Tech Report, there is no distinction between what information is provided to the public or as part of a Cloud customer engagement. In addition to this, we provide our Cloud customers with a variety of tools on Vertex AI to support them in implementing AI effectively and responsibly, including Explainable AI, Model Recommender, and Gen AI Evaluation Service.
