

Dear Committee,  
I would like to submit the following points

- 1 I do not believe that wind farms cause adverse effects on peoples health.
- 2 I do not believe that wind farms cause excessive noise. Just look at the live stock grazing under them. As an ex farmer they are not stressed.
- 3 We need a plan that is regular throughout Australia to give certainty to everybody.
- 4 The economic benifits to regional areas whilst wind farms are being constructed is enormous.The work force and local suppliers that benifit during the construction stage as well as accomodation providers gives a huge boost to regional economies.  
They also create on going employment for local maintaince crews.Land holders who's land is used also get a sure income for years.
- 5 Companies like Pacific Hydro also return large amounts of money to local economies through the support of local events which they sponsor every year many of which would not be viable without this sponsorship.
- 6 Living in a community which has wind farms I find them unobtrusive and have noted that many tourists enjoy being able to go and view them as some of ours are very close to roads.  
I would urge you to allow the construction of more wind farms in Australia . I believe that it will not only help the environment but our economy as well

Thanks  
Jenny Klingberg
