---

We offered to provide to the Committee an example of some of the technical issues we are pursuing. These include:

- use of pectin's as processing aid
- use of carrageenan as processing aid
- use dimethylpolysiloxane as a processing aid
- use of water added **to must to facilitate fermentation**)
- use of L(+) tartaric acid (synthetic or natural source).

We also seek to have the ability to carbonate still wine exported into the United Kingdom in bulk to make carbonated wine.

We are happy with the accuracy of the transcript and I am happy to provide further information to the Committee at any time.

Kind regards,

**Tony Battaglione**  
Chief Executive
