

We run our own Donor Registry, to date we have around 70 women registered. Around 50% of women have used Xytex (US) donors, from either QFG (the large Qld clinic and one of the largest in Australia), Life Fertility (small Brisbane clinic) or Fertility First (another very large clinic).

There are also a small number (10%) of donors sourced through Fairfax Cryobank in the US by Fertility East (another reasonably large NSW clinic).
