

Submission for Native Vegetation Laws, Greenhouse Gas Abatement and  
Climate Change Measures

I own and farm property from which I derive an income. Native Vegetation Laws have impacted on our farming operation in respect of clearing timbered areas, limitations of logging timbered areas, therefore locking up assets.

I feel that with the Native Vegetation Laws, the government could lock up part or all of our property, with the stroke of a pen, without Just Terms Compensation. We have enough timber on our property to make it Carbon Neutral but the Government has stolen that right from us.

We are constantly being told what we cannot do on land that we own, all our rights as landowners are being eroded away before us. I feel that a lot of the new laws are a breach of our constitutional rights to freehold land.
