

Inquiry into the implications of the restriction on the use of Fenthion on Australia's horticultural industry

Submission

To who it may concern

Our company name is Di Marco@son we have been orcharding in our area of the Perth hills for over 80 years there is no doubt without the use of fenthion our operation would cease. as baiting would not be a successful alternative and the alternative cover sprays do not kill the maggot and there for does not stop the breeding cycle and would lead to infestations of Fly in our area.

Regards

Daniel Di Marco
