To Whom It Concerns,

Just wanted to write in for this senate enquiry, and say that I believe pornography is a harmful danger to our kids, and also anyone who views it. The viewing of it and the thoughts related, affect people in ways that are not healthy, and though for a lot of people it is just a personal and private thing, for others it transfers across to how they see men and women, and what they expect from those relationships.

The idea that pornography is a couple of actors who are working, can hardly be held as truthful. The effects on minds, especially children who are far more impressionable and are still forming their views on the world and how they will act in it, cannot be seen in any positive light that I can think of. The fact it is an issue among adults, only makes it a far greater issue among children. It becomes addictive, like drugs and alcohol, and can control your behaviour.

Regards

Paul Rosenfeldt
