Parliamentary Enquiry into 5G

Dear Committee Secretariat,

My name is Elizabeth Hazel Green and I am concerned with the speed of which 5G is being rolled out in Australia.

At first I thought it was only about “speed” of downloads which is what is being sold to us, and how it is a good thing, being none the wiser, I thought nothing of it.

Having read many articles and reports from here and abroad and how it has affected the town of Gateshead in the U K, where insects, birds and trees are dying from the effects of 5G, it made me research further, and have joined local and international groups that share information on 5G.

Australia is a beautiful country with its unique flora and fauna, it would be devastating to see our wild life fall from the skies.

Therefore as an Australian citizen I have the right to know whether the next generation, wifi /communication/network, which actually relies on small cell towers in close proximity, to our houses, schools, hospitals, shopping malls, and aged care homes causes cancer and other health issues.

Yours sincerely

Elizabeth H Green
