

Sean Beavis

Dear Committee Members,

I am writing to express my support for the Climate Change Bill.

Australia is lagging far behind other countries on carbon emission policy and the time is long overdue for us take serious and meaningful action.

We need to join with other countries and set a framework for a 2050 (- or sooner) net zero emissions target with guiding principles to be applied.

There is absolutely no more time left to waste and the longer we delay, the more expensive change will become – not only in economic terms but ultimately in terms of our health and well-being.

I implore you to support this bill, for my children, your children, and all our sakes!

Sincerely,

Sean Beavis
