Peter Whitwell · Since my stroke in April, I lost by 31 Baromunication. My wife As a result of not being able to demonstrate, my wife and had to give up looking after my grandchikling to look after me. She was helping me go through a my completely different life new life. Any Physically, I was not affected, but I could not say what I want to say (get mixed up), and I could not understand things. I could not read a lot and TV. and cro
I said silly things that I could not control through the phone, I felt frustrated for not saying the right things. I could not keep a conversation going for a long time. (since) Coming to DRC (speech Pathology) in May, the work I have done has helped my speech. I am able to see things properly, and say things better. Since then, my speech has got better so much, my memory feels better. I am able to manage longer conversations. It has got better so much that it my life in general has got progressed a lot though man general has got progressed a lot through my shorapy sessions here. I am able to spend a lot more time with my grandchildren now because I can say a lot more now. So metimes, I say still say the wrong things and words, but I am able to change the wrong words to what I want to say. My grand claughter also helps me in my communication by giving me feedback on what I said. Speech Pathology Services have helped the most, absolutely. Even two tweeks, and two hours a week, I could feel that I was able to speak better and cope better in general. I had intensive therapy since my stoke. Over the period of time, I got so much better with my speech. Because things have got so much better, speech. Because things have got so much better, I got to go back to doing a lot things, such as driving. I used to call for Bingo. After I lost
