

To Whom It May Concern

As a resident of the district of Portland I am fully in support of any green option to produce power. I would be an ideal world if all homes and businesses were not reliant on such an environmentally abusive power system in which we all rely.

As an employee of a community based organisation I have seen first hand the benefits that the wind farms have provided for the community. Through the Pacific Hydro Sustainable Communities Fund we have been successful in gaining much needed funding for our programs to continue. Without the wind farms this funding would not have been available to us.

I only wish that the support for social and community initiatives will continue for a long time.
