

Sirs:

As a physicist (energy expert) and longtime environmental advocate, *I applaud your reaching out for public input on this most important matter.*

My focus has been on the **science**. For instance, after talking to a LOT of people about renewables (like wind power), my conclusion is that almost everyone has only a superficial understanding of this very technical matter. Additionally, the public and political perception of wind energy is being driven by special interest lobbyists, and by “environmentalists” who are well-intentioned but misguided.

My belief is that such complex technical matters should be based on real science, *rather than on inputs from those who stand to economically or politically profit.*

The simple webpage where I have collected some pertinent documents is at [**WindPowerFacts.Info**](#). For a simple to understand overview, I would pay special attention to the two short videos posted there.

I have put on numerous community presentations about our energy future, with a focus on the question of whether we want our energy policies to be determined by lobbyists or by science. This is now online at [**EnergyPresentation.Info**](#).

The soundbite conclusion about wind energy is this: **High Cost, Low Benefit.**

Let me know any questions you have on my presentation, or any of my articles.

Sincerely,

john droz, jr.
