

Dear Senators,

As a concerned citizen of Australia, I would like to make my submission about extreme weather events.

I believe the Science about man made climate change and I believe that we need to do everything in our power to change to clean renewable energy to avoid the worst effects of this climate change.

We owe it to future generations of this planet to go the whole way and have a 100% clean renewable target and to meet that target.

Yours sincerely

Vicki Sullivan
