

All

I would like to express my overwhelming support for wind farms within our Community
My experience is of wonderment that we can harness the wind energy for powering communities
with all the positives this brings to the environment, and community with the knock on effect of
employment

I hear of adverse health effects and believe this to be nonsense
Within our community we have wind farms located around Portland and when we take visitors to
the area they cannot hear any noise that would affect your health, me as a resident have also not
noticed any ill effects in the last few years since Wind farms have been up and Running
Income from wind farms also enhances property values within the area they are located

Thank you for considering my response to the enquiry

Graeme Tonkins
