

I applaud the Senate's decision to investigate the persistent excess deaths in our beloved country. I represent myself, a citizen who loves Australia, in this submission.

In 2022 there were an estimated 18,600 to 20,200 more deaths than might have occurred in the absence of the COVID-19 pandemic. This is equivalent to 51 to 53 persons in Australia who die excessively each day!

I did the year-on-year crude mortality change calculation using the Australian Bureau of Statistics (ABS)'s release of the 2022 Death Data (<https://www.abs.gov.au/statistics/people/population/deaths-australia/latest-release>), and the result has shocked me.

Deaths registered – 1917 to 2022

Year	Males	Females	TOTAL	Year on year change
2000	66,817	61,474	128,291	0.1%
2001	66,835	61,709	128,544	0.2%
2002	68,885	64,822	133,707	4.0%
2003	68,330	63,962	132,292	-1.1%
2004	68,395	64,113	132,508	0.2%
2005	67,241	63,473	130,714	-1.4%
2006	68,556	65,183	133,739	2.3%
2007	70,569	67,285	137,854	3.1%
2008	73,548	70,398	143,946	4.4%
2009	72,320	68,440	140,760	-2.2%
2010	73,484	69,989	143,473	1.9%
2011	75,330	71,602	146,932	2.4%
2012	74,794	72,304	147,098	0.1%
2013	75,782	71,896	147,678	0.4%
2014	78,341	75,239	153,580	4.0%
2015	81,330	77,722	159,052	3.6%
2016	81,867	76,637	158,504	-0.3%
2017	82,858	78,051	160,909	1.5%
2018	82,320	76,173	158,493	-1.5%
2019	88,346	80,955	169,301	6.8%
2020	84,588	76,712	161,300	-4.7%
2021	89,401	82,068	171,469	6.3%
2022	99,924	91,015	190,939	11.4%

Source: Australian Bureau of Statistics, Deaths, Australia 2022

There was a 6.3% increase in crude deaths in 2021 compared to 2020, and another increase of 11.4% in 2022 compared to 2021. This means a cumulative increase in crude deaths of **17.7%** compared to 2020 over the two years!! This is totally not in line with the trends as observed in the prior years before Covid-19.

Additionally, I invite the Senate to check out another source of data that may be relevant: the NSW weekly Covid surveillance reports, please look at 'Table 1' in the report for the surveillance week ending 28 May 2022, and subsequent reports all the way to the last report of 2022, being for the week ending 31 Dec 2022. For easy reference, the Senate may wish to check out my Twitter / X thread at:

<https://threadreaderapp.com/thread/1772956990634963029.html>

where I have compiled all those 'Table 1's in an easy-to-read format.

From those 'Table 1's, it seems that many people who received multiple Covid vaccinations ended up in hospital or ICU with Covid, at a proportionally high rate than people who received no-dose of Covid vaccinations. In other words, more vaccinations seem to make people sicker from Covid. I wonder if this trend applies in more illnesses other than just Covid?

The people of Australia deserve an answer, so please investigate this thoroughly.

Xin Yin Ooi
