

# Global Credit Crisis

## Impact on Australian banks cost of funds

Tuesday, 7 October 2008

**Ahmed Fahour**

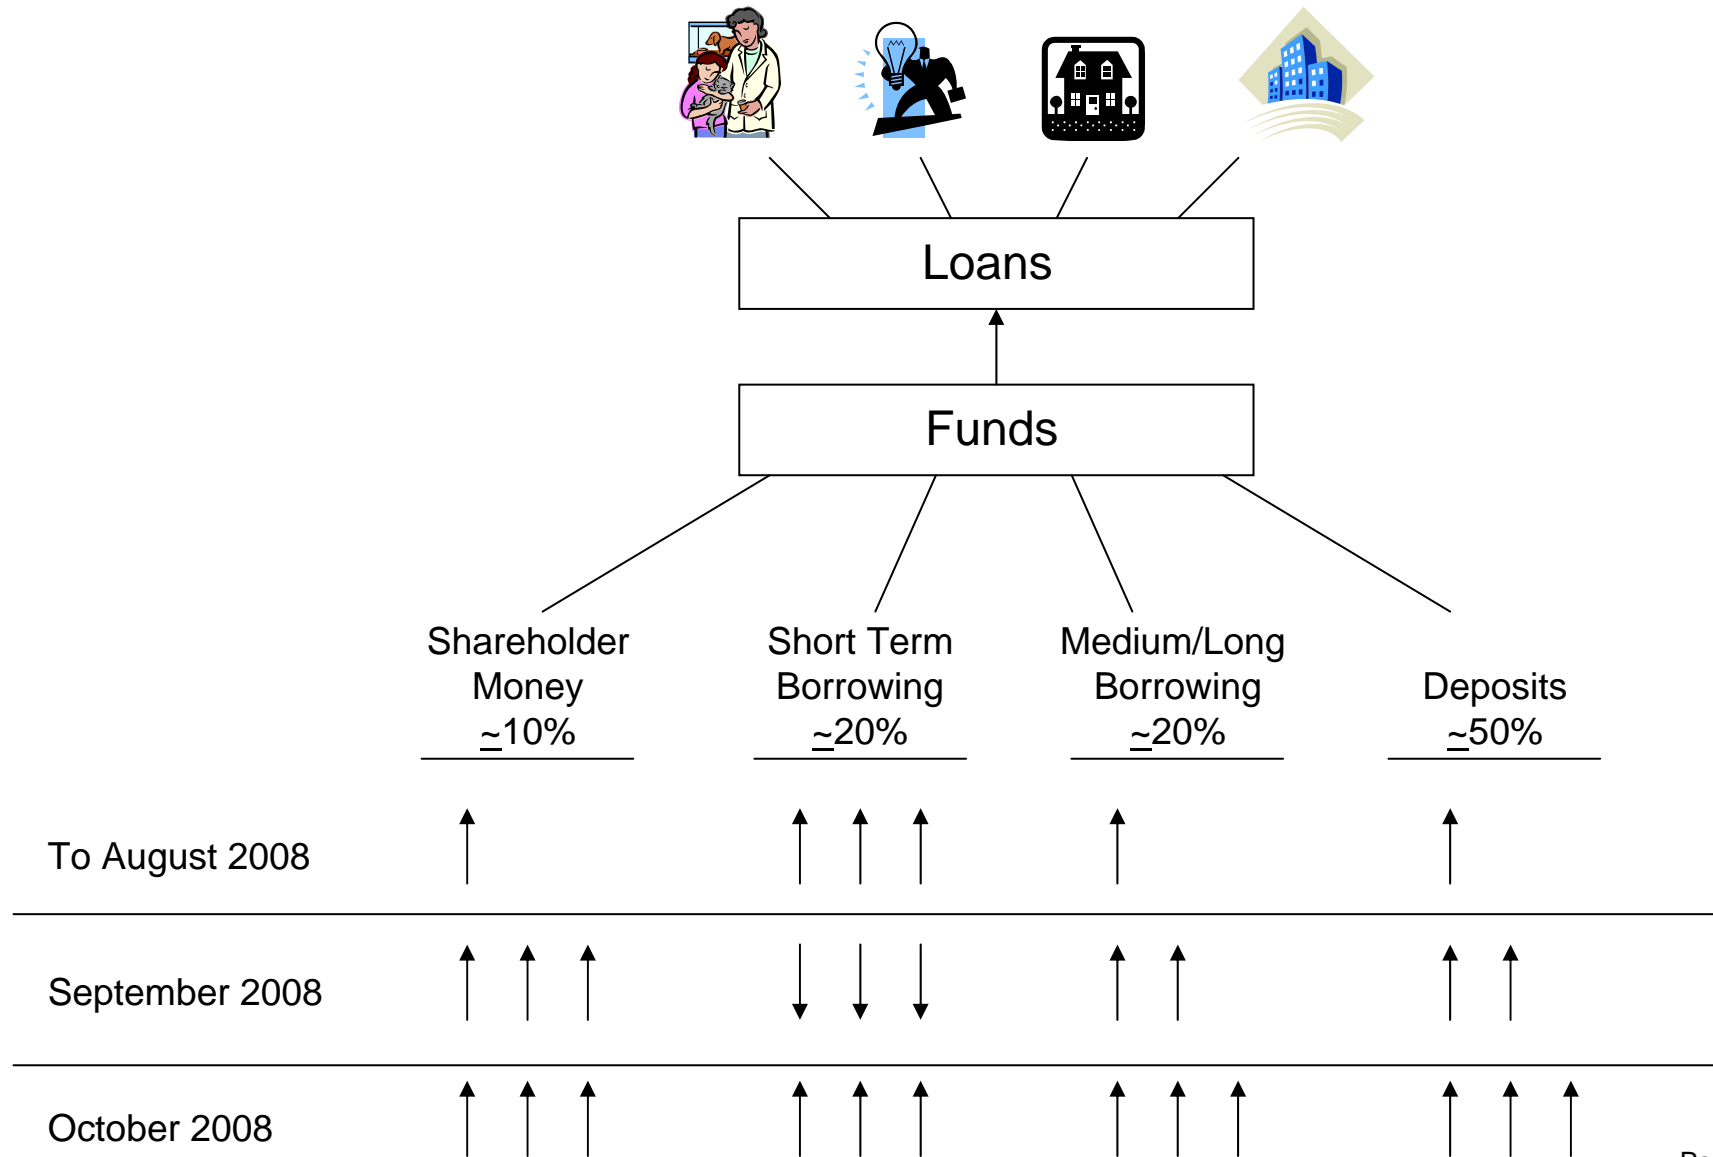

Executive Director & Chief Executive Officer Australia  
National Australia Bank

## Summary

- The Australian banking system remains sound and well capitalised.
- Despite the RBA one percent reduction, it is now apparent that the cost of borrowing money anywhere in the world has become a lot more expensive.
- Since we passed on the last cut of 25 basis points in early September 2008, our average cost of funds has increased around 40 basis points.
- This current increase in our funding costs since September has come from a widening in the spread banks are now paying for short term funding over the RBA cash rates.
- In addition to the short-end cost of funds increased impact on our total cost of funds (40 basis points), the credit crunch will make it more difficult and expensive for Australian banks to borrow money overseas for medium term/long term funding.
- Furthermore, this has pushed up demand for domestic deposits and has forced banks to pay much more for deposits further increasing the total cost of funds which is likely to be around 60 basis points in 12 months time.

# Typical Bank Funding Composition

## Cash / Bills Spreads

# Standard Variable Mortgage Rate vs Funding Costs vs Cash Rate

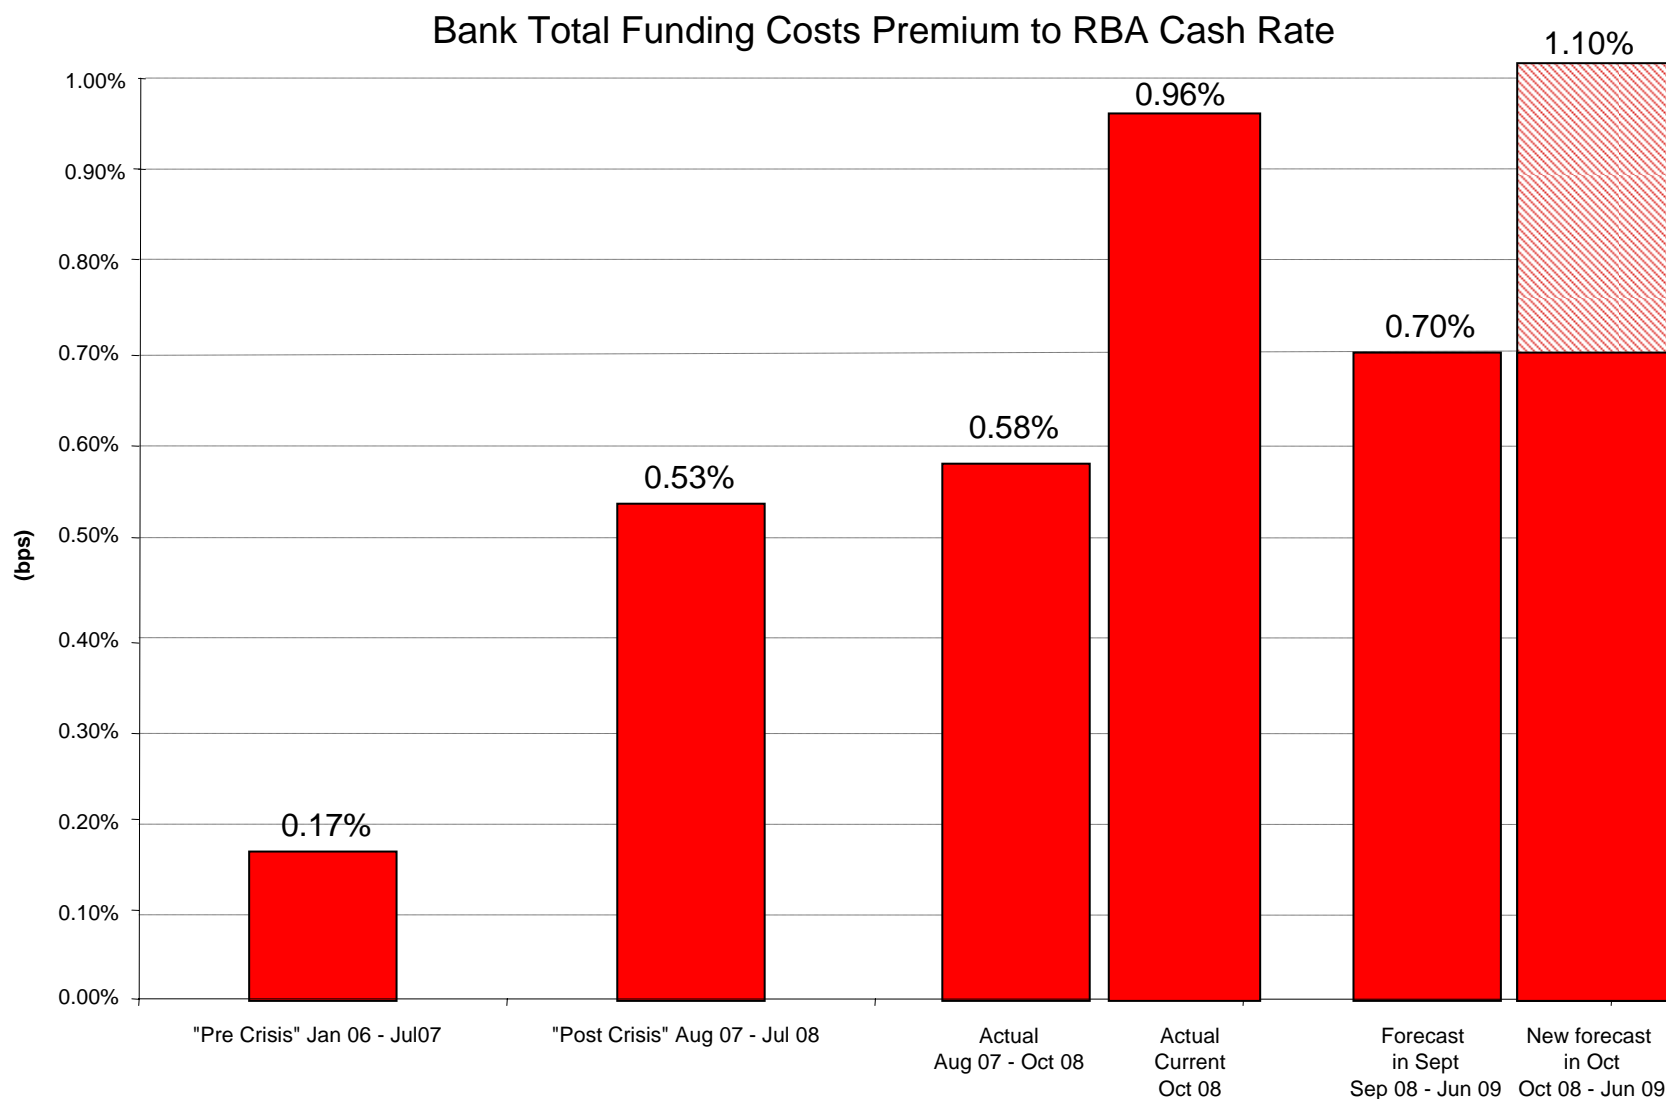

## Banking Funding Costs vs Cash Rate forecast\* over the next 12 months may rise from 0.70% premium to 1.10% premium.

\* Based on assumption all other costs are held constant except for term wholesale funding costs
