

I am an older resident of Brisbane, receiving an age pension.

I know that almost every aspect of my life, and the lives of others, will be impacted by the rapidly increasing effects of climate change.

please make this your top priority - it is far more important than our economy.

less immigration, a lower birth-rate via family planning, a phasing out of all fossil fuel industries, replaced by a quicker phasing in of renewable energy industries, protection of what is left of our environment. These are our very, very urgent priorities.

Let's see our government's wise plan for climate change mitigation and, of course, let's see it implemented and acted upon NOW.

with thanks,
Brenda Mason
