

Why is nuclear power technology not being considered as a viable alternative to current energy production? With all the debate about converting to clean energy why are we ignoring the most obvious solution in safe clean nuclear power.

Many nations around the world are embracing the most efficient form of clean energy available today. We need informed discussion among scientists who understand the benefits of clean safe nuclear power. I recommend investigating the potential for our use of nuclear technology. We have a very good supply of the raw materials needed so why not use the resources we have?
