

To:
Committee Secretary,
Senate Standing Committees on Environment & Communications

If a lay person like me (a Bus Driver) who does the math and sees that as we (Australians) have an increasing demand/need for power while the National grid's ability to supply is decreasing, we are heading in the wrong direction!. Please stop pandering to Corporations (Rent seeking parasites) and start enacting legislation to serve (as you were elected to do) the needs of ALL Australians!. (especially those doing it tough already, with high rents etc) While you're at it, please, please, stop Chris Bowen's mantra "Renewables are the cheapest form of energy"! All things considered, it's a sugar hit!. Renewables FAIL on ALL fronts to deliver cheaper, cleaner, safer energy and Chris Bowen will be the 'Emperor with no clothes' when a thorough and honest analysis is conducted. Current examples of Countries who have gone down this road,(100% renewables) California, Germany have been forced to rethink.(Germany had to go back to COAL) Let's end this one sided, hypocritical, debate/ban on Nuclear Power (allowing Submarines for War while rejecting the same SMR's use for Peaceful/Essential needs) Is there some other agenda at play here?.

As the Subject title to my submission states this is a 'No Brainer'!. In my own discussions with work colleagues and any thinking person (other than green/brainwashed) they struggle to see how increased demand (electric cars etc) will be met with Wind & Solar(unless we cover the continent with these monolith's) during Peak Demand at night!. (Inverters,Batteries etc, notwithstanding) We just aren't there, YET!. Please ADD my Personal request to support the Bill to remove the Legislated Ban on Nuclear Power (the only Nation in the World with one) and end the hypocrisy that allows other Nations to benefit from the raw materials we have in abundance and export to them.

Yours Faithfully,

Desmond Whyte
