

The capping visa plan will seriously damage the Australian economy as the following possible reasons:

1. Government will waste tax payers at least 100 million dollars compensation refund to the visa capped applicants;
2. Domestic education institutes and immigration agents will face vast economic loss with the uncertainty of immigration changes;
3. Migrant-linked or oversea students-linked business such as local convenient stores, small food restaurants will face bankruptcy because of the losing major economic sources.
4. The national economy recovery will short a major financial support.
5. The working class needs cheap and reliable working assistants;
6. The national big business need cheap and reliable working resources;
7. The government (state government and federal government need effective tax source.

The visa capping plan will cut national economy sources and worsen national economy.

Therefore, this plan is not a idle plan to meet the current immigration needs and economy wants.
