

Submission:

“I write in support of rural wind farms.

Renewable energy is an essential part of our response to climate change, and, by a wide margin, wind power is the most commercially and technically viable form.

I have been a wind power consumer through my electricity supplier for several years. I believe the general public is very supportive of the principle of renewable energy but this is often lost in the business of their lives so any government action that helps achieve this goal is precisely what we want.”
