

Please: use your vote to carry out an investigation into the impacts of mining coal seam gas on:

- the sustainability of water aquifers all over Australia and in particular the Gloucester mining which could pollute the catchment area of our magnificent Manning River and the local underground water supply/ river which extends across the fertile farming land of Mondrook, Tinonee, Taree Estate;
- we must protect the property rights and values of landholders who have given their heart and soul to producing the best crops for Australia.;
- our prime agricultural land must be protected and used for the good of the whole Australian community as well as for our farmers and their families;
- the social and economic benefits or otherwise for regional towns and the effective management of relationships between mining and other interests; and
- other related matters including health impacts.

Sue Odgers
