

I do not support the Inquiry to make Medicare funding for certain types of abortions illegal.

I am originally from Sweden where free abortion has been legal since 1974. The legislation states that up until the end of the eighteenth week of the pregnancy the choice of an abortion is entirely up to the woman, for whatever reason. Despite the right of free abortion, the abortion rate has not increased.

When the sex can be determined on the foster the mother is approximately 20 weeks pregnant. By then it is already too late to have an abortion. So saying that women are getting abortions because they are expecting a girl is not correct.

Taking the right away from a woman to make her own choice over her own life is absurd. We live in a western civilized country in the 21st century, how can this even be an issue?

Free abortion. Pro choice.
