

Dear sir/madam,

On behalf of our association, I would like to oppose to any wind farm in rural areas in any part of the world for the following reasons:

- (1) wind power stations are unreliable source of energy and could be significantly affected by the availability of wind which is out of our control;
- (2) the productivity is low comparing to coal or nuclear powers;
- (3) maintenance costs are high and life span is short;
- (4) all wind power stations must be heavily subsidized by the government/taxpayers, or the electricity consumers and is not sustainable;
- (5) the wind turbines kills damage all natural scenery, natural heritages
- (6) There are other better alternatives which are more productive and environmental less destructive, and cheaper energy sources
- (7) wind power peoposers and developer make huge profit through these heavily subsidized projects which is absolutely unfair to the public.

Please stop all wind power stations and reject all wind farm proposals.

Thanks you

Young Ng
