Dear sir/madam,

As a concerned citizen and committed environmentalist I wish to STRONGLY indeed PASSIONATELY support the removal of the legislative ban on the development of nuclear power in Australia.

So many other large economies have adopted this option and we are fortunate in being endowed with abundant uranium and thorium and having the opportunity to now adopt what is a thoroughly mature technology with zero carbon footprint.

If it is good enough for UK, China, Japan, USA to take a few examples surely it is time for us as a nation to 'grow up' and adopt this amazing technology.

Please repeal the outdated legislation impeding our adoption of nuclear energy,

A/Prof James Doery
