Question Subject: Safety of Hydroxychloroquine

Question Type: Written

Senator: Katy Gallagher

Question:

Is hydroxychloroquine a safe and effective treatment for COVID-19.

Answer:

There is currently very limited evidence to support the use of medications for the treatment of COVID-19. Several medications, including hydroxychloroquine, have been proposed as likely candidates to treat COVID-19.

Globally, a number of clinical trials are assessing the use of hydroxychloroquine in the prevention and treatment of COVID-19 patients.

The Australian Health Protection Principal Committee (AHPPC) advice of 7 April 2020 stated that off-label use of drugs like hydroxychloroquine is not recommended and these medicines should only be used as part of a clinical trial. [1]
