

To whom it may concern.

This is a written submission concerning Langi Willi, Skipton. This property has been farmed by our family for over 100 years. The landscape is picturesque and has the Mt. Emu Creek running through it. The house was sited facing north to take in the beautiful surrounding bushland. The proposed placing of the turbines on our neighbour's property will totally ruin this aspect. The value of our property will surely decrease and the environmental impact will be huge. I have personally seen broilgas in the area very near to the siting of the turbines. The Mt. Emu Creek flows nearby and platypus abound in these waters. The very size of these turbines are threatening in themselves and will create vibration and noise. The impact of health related problems is, as yet, unknown but there are indications that they may well surface in the future.

This proposed wind farm has caused a split in the local community with frustration and sometimes anger arising between the farmers who have agreed to the turbines and those who have not.

I beg you to reconsider this project .

From Mrs. William Mackinnon
