National Radioactive Waste Management Amendment (Site Specification, Community Fund and Other Measures) Bill 2020 [Provisions] – 30 June 2020

### **ANSWER TO QUESTION ON NOTICE**

Department of Defence

**Topic:** Senate Economics Legislation Committee – 30 June 2020 – Q10 - Woomera Liquid Fuel Facilities Aviation Risk Assessments - Brockman

**Question reference number:** 10

**Senator/Member:** Slade Brockman

**Type of question:** Written

**Date set by the committee for the return of answer:** 31 July 2020

#### **Question:**

In relation to liquid fuel facilities at or near Woomera air base, what aviation impact and/or risk/safety assessments have been done? Please provide copies of final documentation to the Committee.

#### **Answer:**

No direct assessments of the liquid fuel facilities at or near RAAF Base Woomera have been undertaken regarding their survivability in the event of an aviation mishap. However, these risks are considered during both the siting process for such facilities and as part of the estate planning process. Management of the risk of flight over or near sensitive areas such as liquid fuel facilities is conducted by operational commanders and is subject to a range of considerations, including the type of flight being conducted and weather. Risks are reduced so far as reasonably practicable in accordance with the requirements of the *Workplace Health and Safety Act*. The effective management of risk is an integral part of all Defence activities and this includes the requirement to eliminate risks to health and safety so far as is reasonably practicable (SFARP). Given the risk controls in place, the risk of an ADF aviation mishap in the vicinity of liquid fuel facilities is considered to be very low.
