

Paris, 17 01 2011

Electrical windmills ruin country vistas, are harmful to fauna and flora, represent a high cost that is charged to those people whose houses lose at least 20% of their value, mean that electricity is charged at a higher rate and have to be subsidized by the taxpayers. Furthermore, when they are most needed, they do not produce any energy. In this field, one finds only lies about their benefits relative to their cost and financially dodgy deals that lack transparency. The space they take up in the countryside should have alerted us to their dubious merits in terms of finding a modern solution destined for any sort of bright future.
